ZONING BOARD OF APPEALS STAFF REPORT

FOR: City of Novi Zoning Board of Appeals **MEETING DATE:** June 11, 2024

REGARDING: **210 Buffington Drive # 50-22-03-385-026 (PZ24-0022)**

BY: Alan Hall, Deputy Director Community Development

I. GENERAL INFORMATION:

Applicant
Scenic Pines Estates

Variance Type
Dimensional Variance

Property Characteristics

Zoning District:	This property is zoned One-Family Residential (R-4)
Location:	south of South Lake Drive, east of West Park Drive
Parcel #:	50-22-03-385-026

Request
The applicant is requesting a variance from the City of Novi Zoning Ordinance Section 3.28.6.C.iv.a to omit the requirement for a landscape berm along the east, west and south property lines.

II. STAFF COMMENTS:

The applicant is seeking a variance to not provide a landscape berm along two property lines. The site has an irregular shape with regulated woodlands and wetlands component.

History: *On November 19, 2019 – This same variance was approved, but now has expired.*

III. RECOMMENDATION:

The Zoning Board of Appeals may take one of the following actions:

1. I move that we ***grant*** the variance in Case No. **PZ24-0022**, sought by _____, for _____ because Petitioner has shown practical difficulty requiring _____ _____ _____.

   (a) Without the variance Petitioner will be unreasonably prevented or limited with respect to use of the property because _____ _____ _____.

   (b) The property is unique because_____ _____ _____.

   (c) Petitioner did not create the condition because_____ _____ _____.

   (d) The relief granted will not unreasonably interfere with adjacent or surrounding properties because_____ _____ _____.

   (e) The relief if consistent with the spirit and intent of the ordinance because _____ _____.

   (f) The variance granted is subject to:

      1. _____.
      2. _____.
      3. _____.
      4. _____.

2. I move that we ***deny*** the variance in Case No. **PZ24-0022**, sought by _____, for _____ because Petitioner has not shown practical difficulty requiring_____ _____ _____.

   (a) The circumstances and features of the property including _____ _____ _____ are not unique because they exist generally throughout the City.

   (b) The circumstances and features of the property relating to the variance request are self-created because _____ _____ _____.

   (c) The failure to grant relief will result in mere inconvenience or inability to attain higher economic or financial return based on Petitioners statements that _____ _____ _____.

   (d) The variance would result in interference with the adjacent and surrounding properties by _____ _____ _____.

   (e) Granting the variance would be inconsistent with the spirit and intent of the ordinance to _____ _____ _____.

Should you have any further questions with regards to the matter please feel free to contact me at (248) 347-0417.

- Existing or proposed buildings or addition on the property
- Number & location of all on-site parking, if applicable
- Existing & proposed distance to adjacent property lines
- Location of existing & proposed signs, if applicable
- Floor plans & elevations
- Any other information relevant to the Variance application

ZONING BOARD OF APPEALS APPLICATION

V. VARIANCE

A. VARIANCE (S) REQUESTED

☑ DIMENSIONAL ☐ USE ☐ SIGN

There is a five-(5) hold period before work/action can be taken on variance approvals.

B. SIGN CASES (ONLY)

Your signature on this application indicates that you agree to install a **Mock-Up Sign** ten-(10) days before the schedule ZBA meeting. Failure to install a mock-up sign may result in your case not being heard by the Board, postponed to the next schedule ZBA meeting, or cancelled. A mock-up sign is **NOT** to be actual sign. Upon approval, the mock-up sign must be removed within five-(5) days of the meeting. If the case is denied, the applicant is responsible for all costs involved in the removal of the mock-up or actual sign (if erected under violation) within five-(5) days of the meeting.

C. ORDINANCE

City of Novi Ordinance, Section 3107 – Miscellaneous

No order of the Board permitting the erection of a building shall be valid for a period longer than one-(1) year, unless a building permit for such erection or alteration is obtained within such period and such erection or alteration is started and proceeds to completion in accordance with the terms of such permit.

No order of the Board permitting a use of a building or premises shall be valid for a period longer than one-hundred and eighty-(180) days unless such use is establish within such a period; provided, however, where such use permitted is dependent upon the erection or alteration or a building such order shall continue in force and effect if a building permit for such erection or alteration is obtained within one-(1) year and such erection or alteration is started and proceeds to completion in accordance with the terms of such permit.

D. APPEAL THE DETERMINATION OF THE BUILDING OFFICIAL

PLEASE TAKE NOTICE:

The undersigned hereby appeals the determination of the Building Official / Inspector or Ordinance made

☐ CONSTRUCT NEW HOME/BUILDING ☐ ADDITION TO EXISTING HOME/BUILDING ☐ SIGNAGE

☐ ACCESSORY BUILDING ☐ USE ☐ OTHER _____

VI. APPLICANT & PROPERTY SIGNATURES

A. APPLICANT

Applicant Signature _____ Date 05.01.2024

B. PROPERTY OWNER

If the applicant is not the owner, the property owner must read and sign below:

The undersigned affirms and acknowledges that he, she or they are the owner(s) of the property described in this application, and is/are aware of the contents of this application and related enclosures.

Property Owner Signature _____ Date 05.01.2024

VII. FOR OFFICIAL USE ONLY

DECISION ON APPEAL:

☐ GRANTED ☐ DENIED

The Building Inspector is hereby directed to issue a permit to the Applicant upon the following and conditions:

Chairperson, Zoning Board of Appeals _____ Date _____

ZONING BOARD OF APPEALS VARIANCE APPLICATION CHECKLIST

The following items are required for a complete Variance application. Incomplete applications will be returned.

☑ **Signed Application Form**

Complete the Zoning Board of Appeals application form. Application must be signed by the applicant and the property owner (if different).

☑ **Response to Variance Review Standards – Dimensional, Use, or Sign**

Select the applicable Review Standards for the requested Variance and complete in full. Use additional paper if needed. If you don't know which Review Standards to complete, call the Community Development Department at 248.347.0415 for guidance.

☑ **Dimensioned Site Plan (1 copy & 1 digital copy submitted as a PDF)**

- Existing or proposed buildings or additions on the property.
- Number and location of all on-site parking spaces.
- Existing and proposed distances to adjacent property lines.
- Location of existing and proposed signs, if applicable.
- Any other information relevant to the Variance application.

☑ **Dimensioned Drawings and Plans (1 copy & 1 digital copy submitted as a PDF)**

- Floor plans and elevations with all proposed buildings and additions.
- All existing and proposed signs on the property (photographs may be used).
- For use variances, include floor plan showing the existing and proposed layout and functions of each area.
- For multi-family residential structures or projects, a summary showing the existing and proposed number of dwelling units by type (efficiency, one-bedroom, two-bedroom, etc.)

☑ **Other Helpful Information – Optional (1 copy & 1 digital copy submitted as a PDF)**

- Photographs of the lot or structure that shows the special conditions or circumstances described in the application.
- Photographs or maps that show how other properties in the area enjoy the same type of property rights related to the Variance.
- Letters of support from the neighbors who would be most affected by your request.

☑ **Fee** (make check payable to the City of Novi)

Single Family Residential (Existing) $220 (With Violation) $275
Single Family Residential (New) $275
Multiple/Commercial/Industrial $330 (With Violation) $440
Signs $330 (With Violation) $440
House Moves $330
Special Meetings (At discretion of Board) $660

Additional Information

In the course of reviewing the application, the Planning Department staff may request additional information from the applicant.

REVIEW STANDARDS
DIMENSIONAL VARIANCE

The Zoning Board of Appeals (ZBA) will review the application package and determine if the proposed Dimensional Variance meets the required standards for approval. In the space below, and on additional paper if necessary, explain how the proposed project meets each of the following standards. (Increased costs associated with complying with the Zoning Ordinance will not be considered a basis for granting a Dimensional Variance.)

Standard #1. Circumstances or Physical Conditions.

Explain the circumstances or physical conditions that apply to the property that do not apply generally to other properties in the same zoning district or in the general vicinity. Circumstances or physical conditions may include:

a. **Shape of Lot.** Exceptional narrowness, shallowness or shape of a specific property in existence on the effective date of the Zoning Ordinance or amendment.
☐ Not Applicable ☑ Applicable If applicable, describe below:
See attached.

and/or

b. **Environmental Conditions.** Exceptional topographic or environmental conditions or other extraordinary situations on the land, building or structure.
☐ Not Applicable ☑ Applicable If applicable, describe below:
See attached.

and/or

c. **Abutting Property.** The use or development of the property immediately adjacent to the subject property would prohibit the literal enforcement of the requirements of the Zoning Ordinance or would involve significant practical difficulties.
☑ Not Applicable ☐ Applicable If applicable, describe below:

Standard #2. Not Self-Created.

Describe the immediate practical difficulty causing the need for the Dimensional Variance, that the need for the requested variance is not the result of actions of the property owner or previous property owners (i.e., is not self-created).

See attached.

Standard #3. Strict Compliance.

Explain how the Dimensional Variance in strict compliance with regulations governing area, setback, frontage, height, bulk, density or other dimensional requirements will unreasonably prevent the property owner from using the property for a permitted purpose, or will render conformity with those regulations unnecessarily burdensome.

See attached.

Standard #4. Minimum Variance Necessary.

Explain how the Dimensional Variance requested is the minimum variance necessary to do substantial justice to the applicant as well as to other property owners in the district.

See attached.

Standard #5. Adverse Impact on Surrounding Area.

Explain how the Dimensional Variance will not cause an adverse impact on surrounding property, property values, or the use and enjoyment of property in the neighborhood or zoning district.

See attached.

The Zoning Board of Appeals (ZBA) will review the application package and determine if the proposed Dimensional Variance meets the required standards for approval. In the space below, and on additional paper if necessary, explain how the proposed project meets each of the following standards. (Increased costs associated with complying with the Zoning Ordinance will not be considered a basis for granting a Dimensional Variance.)

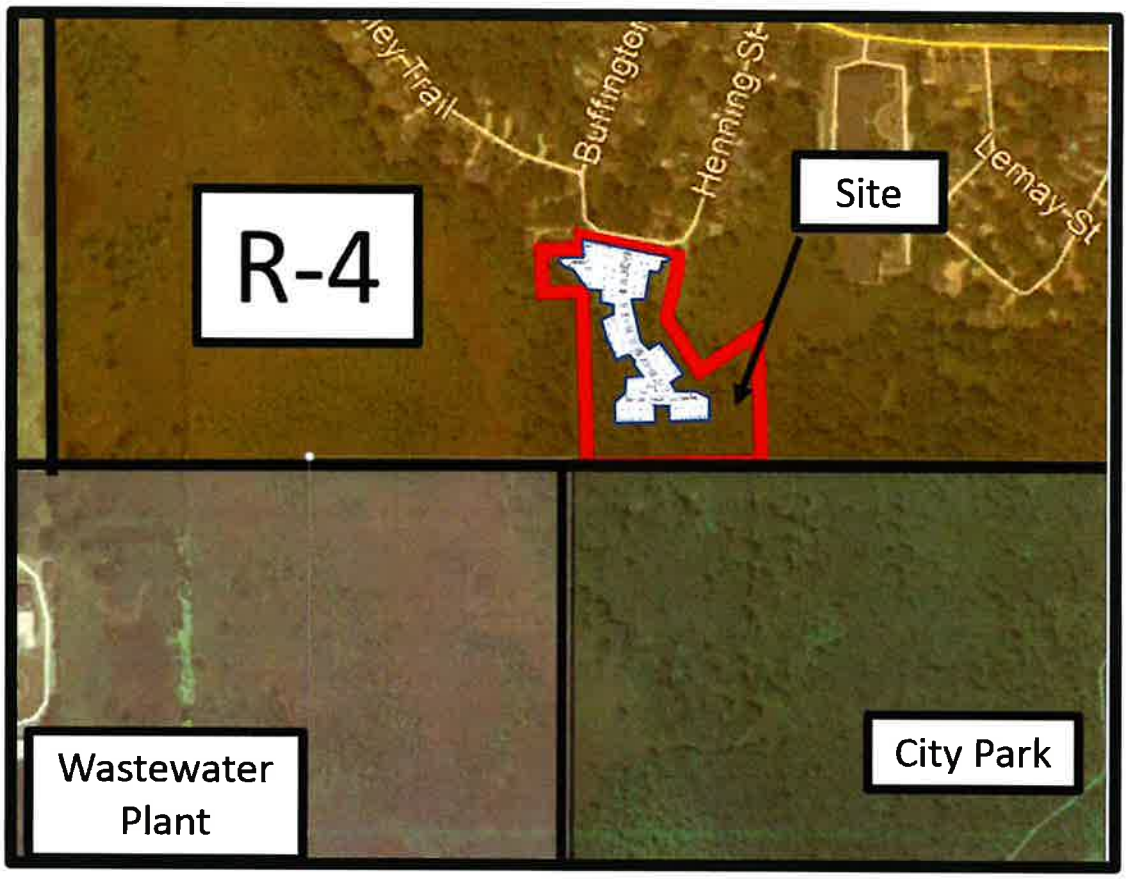
Standard #1. Circumstances or Physical Conditions.

Explain the circumstances or physical conditions that apply to the property that do not apply generally to other properties in the same zoning district or in the general vicinity. Circumstances or physical conditions may include:

a. **Shape of Lot.** Exceptional narrowness, shallowness or shape of a specific property in existence on the effective date of the Zoning Ordinance or amendment. **Applicable**, described below:

The need for a variance is due to unique circumstances peculiar to this property. These conditions create an unnecessary hardship that requires relief. The property is irregularly shaped. The unusual shape of the property is a polygon with uneven lengths and 11 unique bearings. Berm construction would be irregular and haphazard if were to follow the East, South and West property lines. Additionally, the geometry of the property lines would have the berm changing direction several times creating an unusual and impractical configuration winding through the existing woodlands that won't serve the purpose intended. A berm is provided at the north property line parallel with the existing street and situated in a standard configuration to provide intended screening between residential properties. The City of Novi Ordinance Section 3104 allows the Zoning board of Appeals to permit the elimination of the berm requirement prescribed in the Zoning Ordinance because the property line configuration clearly demonstrates that the Shape of the Property is so unique that the circumstances are not generally applicable to other rectilinear properties. This property meets the required legal standard.

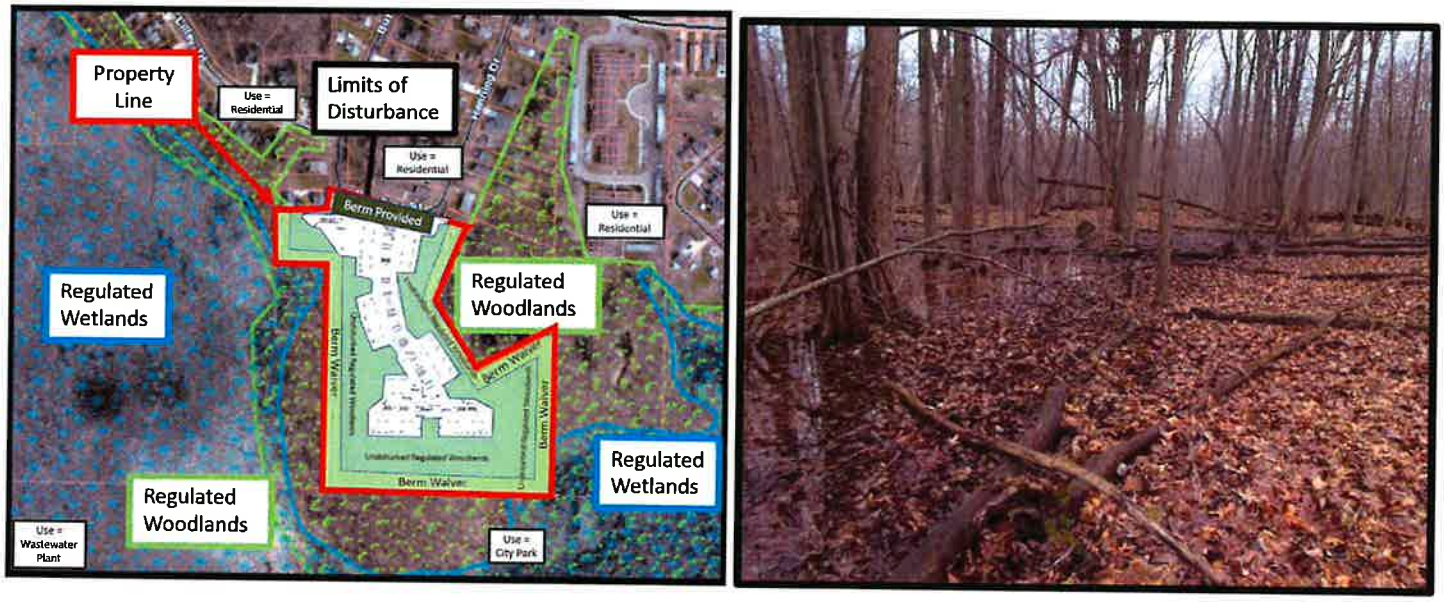
Exhibit 1: Shape of Property



b. **Environmental Conditions.** Exceptional topographic or environmental conditions or other extraordinary situations on the land, building or structure. **Applicable**, described below:

The need for a variance is due to unique circumstances peculiar to this property. These conditions create an unnecessary hardship that requires relief. The Site Area is 9.44 AC gross and includes 1.7 Ac of regulated wetlands and 7.45 Ac of regulated woodland that constitute 80% of the net acreage. These natural features are an important element for the property and surrounding community. The site plan strives to preserve the natural features to maximum affect by utilizing the City of Novi Cluster option which permits clustering of the units on the interior of the site to leave large sections undisturbed. The undisturbed area acts as a natural buffer between properties. The requirement to cut down trees and impact wetlands to construct a screening berm in the middle of the existing woods is impractical and undesirable. The existence of the abundant natural features on the site is the environmental condition that creates and extraordinary situation requiring relief. The City of Novi Ordinance Section 3104 allows the Zoning board of Appeals to permit the elimination of the screening berm requirement prescribed in the Zoning Ordinance because the large quantity of natural feature demonstrate that Environmental Conditions exist on the property that do not apply generally to other properties. This site clearly meets the legal standard.

Exhibit 2: Environmental Conditions



c. **Abutting Property.** The use or development of the property immediately adjacent to the subject property would prohibit the literal enforcement of the requirements of the Zoning Ordinance or would involve significant practical difficulties. **Not Applicable/Not Required.**

Standard #2. Not Self-Created.

Describe the immediate practical difficulty causing the need for the Dimensional Variance, that the need for the requested variance is not the result of actions of the property owner or previous property owners (i.e., is not self-created).

The applicant's problem is not self-created. The problem is an unnecessary hardship on the property owner requiring relief. Per City of Novi Zoning section 3.28.6.C the Planning Commission can and on 9/25/2019 did approve a reduction to building setbacks to preserve the natural features of the site. Commission approved a reduction of front building setbacks from the streets from 30 feet from the edge of pavement to 25 feet in order to protect regulated woodlands in the back yards. The approval was conditioned on a ZBA variance for elimination of the berms in question. The reason the Planning Commission could not waive the berm requirement themselves is because Section

3.28.6.C.iv.a wording says single-family residential "districts" rather than single-family residential "use." The wording of the ordinance inadvertently moves the jurisdiction out of Planning Commission purview regarding berm construction and places it into the jurisdiction of the ZBA as a zoning matter. This applicant did not write the ordinance and had no part in choice of words. The intent of the ordinance was to create berms between uses to protect adjacent neighbors from viewing non-standard configurations. The actual situation is there are no residential uses in proximity to the east, south, and west property lines and never will be. Those adjacent properties are zoned for residential uses but can never be developed as such. There is a city park to the east and south and a wastewater plant to the west. All the adjacent property is burdened with a 300 Ac wetland that is un-buildable. If the planners who wrote the ordinance has considered the possibility of a cluster development adjacent to permanent non-residential uses in a residential district, they may have had the foresight to include the phrase "residential use" rather than "residential district." Unfortunately, not every possible situation can be anticipated when the ordinances are being written and they did use the word "district" which make this a ZBA matter. The City planner is in full support of the variance, and as stated previously, the City Planning Commission has already approved it, subject to the ZBA granting the required variance to eliminate the required berm so a 75' natural buffer can remain. The City of Novi Ordinance Section 3104 allows the Zoning board of Appeals to permit the elimination of the berm requirement prescribed in the Zoning Ordinance because the narrative demonstrates that the elimination of the berm was not Self-Created. The legal standard has been met.

Exhibit 3: Condition created by Ordinance word selection

C. Reduced setbacks subject to the Planning Commission making the following findings:

i. The proposed changes will not adversely affect neighboring properties;

ii. Density will not exceed that permitted in the district;

iii. Safe access is provided to the development; and

iv. The following conditions are met:

a. A landscape berm meeting the requirements of Section 5.5.3.A.i - ii is provided adjacent to other single family residential districts;

Standard #3. Strict Compliance.

Explain how the Dimensional Variance in strict compliance with regulations governing area, setback, frontage, height, bulk, density or other dimensional requirements will unreasonably prevent the property owner from using the property for a permitted purpose or will render conformity with those regulations unnecessarily burdensome.

The property cannot be reasonably used for the purposes permitted which creates an unnecessary hardship. On 9/25/2019 the Planning commission unanimously approved the Scenic Pines Estates JSP 18-76 Special Land Use Permit, Preliminary Site Plan with One-Family clustering option and site condominium, Wetland Permit, Woodland Permit, and Stormwater Management Plan. Without ZBA approval of elimination of the berm, supported by planning staff and Planning Commission, the property owner will be unreasonably prevented from using the property for the approved and permitted purpose. Strict compliance with the berm requirement would render the City of Novi cluster option unavailable without cutting down the natural features it aims to protect. The clustered development area has

prescribed dimensional constraints, separations and requirements that limit the amount of development area. If berms were required within the development area, the area to build homes and infrastructure would be unavailable and the cluster option unobtainable. The spirit and intent of the cluster ordinance could not be achieved WITHOUT the variance. The City of Novi Ordinance Section 3104 allows the Zoning board of Appeals to permit the elimination of the berm requirement prescribed in the Zoning Ordinance because strict compliance with the berm requirement will unreasonably prevent use of the property in the permitted manner and the legal standard has been met.

Standard #4. Minimum Variance Necessary.

Explain how the Dimensional Variance requested is the minimum variance necessary to do substantial justice to the applicant as well as to other property owners in the district.

The variance requested is the minimum variance necessary. The 75' setback required by the City of Novi Cluster Option Ordinance along the three property lines in question will remain in full force and affect and will protect and preserve regulated woodland and wetlands along those property lines. The North property line is not included in this request because a berm can be built at that location without clearing abundant natural features to make way for the berm. The City of Novi Ordinance Section 3104 allows the Zoning board of Appeals to permit the elimination of the berm requirement prescribed in the Zoning Ordinance for three of the four property lines because the facts above demonstrate that the elimination of the requirement is limited to the east, west and south property lines, but EXCLUDES the north property line and is the minimum variance necessary to do substantial justice to the applicant as well as to other property owners in the district by preserving and protecting natural features rather than building a berm. The proposal meets the legal standard.

Standard #5. Adverse Impact on Surrounding Area.

Explain how the Dimensional Variance will not cause an adverse impact on surrounding property, property values, or the use and enjoyment of property in the neighborhood or zoning district.

The variance will not alter the essential character of the area but will actually enhance the character. Clearing the regulated woodlands creates an unnecessary hardship on both the property owner and the adjacent neighboring properties due to the loss of significant natural features. The spirit of the Zoning Ordinance is observed because the proposed 75' wide undisturbed regulated woodlands and wetlands on the eastern, southern, and western property lines create a natural buffer between the property and the adjacent districts so no adverse impacts will be introduced. These natural features provide a superior buffer than the alternative required by the zoning ordinance, from which we seek relief. Removal of these wonderful resources to build a less effective screening berm in their stead would be a disservice to the community and at the same time render the Cluster Option virtually pointless. Property values will not be diminished or impaired but instead will be enhanced through the preservation of the natural features for the property owner and adjacent parcels. The supply of light and air will remain exactly as they are in the existing condition by preserving the woodlands. Public safety is unaffected by the elimination of the berm because the berm requirement is not a public safety provision. Preserving the existing woodlands will not unreasonably increase the threat of fire danger because the woods currently exist naturally and is intermixed with 300 acres of wetland. The variance will not in any other respect impact the public health, safety, comfort, or morals or general welfare of residents. By granting this variance, substantial justice will be provided to the petitioner and surrounding property owners. The City of Novi Ordinance Section 3104 allows the Zoning board of Appeals to permit the elimination of the berm requirement prescribed in the Zoning Ordinance because the facts presented above demonstrate that the elimination of the berm requirement does not create an Adverse Impact on Surrounding Area and the proposed alternative meets the required legal standard.

Petitioner has met all requirements set forth to grant the variance.
All the Elements of Practical Difficulty exist. We respectfully request your support.

2. ALL PAVEMENT MARKINGS, TRAFFIC CONTROL SIGNS, AND PARKING SIGNS SHALL COMPLY WITH THE DESIGN AND PLACEMENT REQUIREMENTS OF THE 2011 MICHIGAN MANUAL ON UNIFORM TRAFFIC CONTROL DEVICES.
3. CONTRACTRO TO FIELD VERIFY ALL EXISTING UTILITY LOCATIONS, INVERTS AND GRADES PRIOR TO START OF WORK.
4. TWO (2) COPIES OF AS-BUILT PLANS SHALL BE SUBMITTED TO THE CITY ENGINEER WITHIN THIRTY (30) DAYS OF THE COMPLETION OF THE UTILITY INSTALLATION AS PER SECTION 31-7 (A) CITY OF NOVI ORDINANCE.
5. CITY OF NOVI HAS NO RESPONSIBILITY TO IMPROVE OR MAINTAIN THE PRIVATE STREETS CONTAINED WITHIN OR PRIVATE STREETS PROVIDING ACCESS TO THE PROPERTY DESCRIBED IN THIS PLAN.
6. "ECONOMIC IMPACT; 25 HOMES X $500,000 (APPROX) = $12,500,000 INCREASE TAX BASE AT BUILDOUT". HOME SIZE & EXPECTED SALES PRICE OF NEW HOMES: 1,800-2,200 Sq ft, $450,000-$600,000".
7. THE SITE PLAN SHALL BE DESIGNED IN ACCORDANCE WITH THE DESIGN AND CONSTRUCTION STANDARDS (CHAPTER 11).

FIRE DEPARTMENT NOTES

1. ALL FIRE HYDRANTS AND WATER MAINS SHALL BE INSTALLED AND IN SERVICE PRIOR TO ABOVE FOUNDATION BUILDING CONSTRUCTION.
2. ALL ROADS SHALL BE PAVED AND CAPABLE OF SUPPORTING 35 TONS PRIOR TO CONSTRUCTION OF ABOVE FOUNDATIONS.
3. BUILDING ADDRESSES SHALL BE POSTED FACING THE STREET DURING ALL PHASES OF CONSTRUCTION. ADDRESSES SHALL BE A MINIMUM OF THREE INCHES IN HEIGHT ON A CONTRASTING BACKGROUND.
4. PROVIDE 4"-6" DIAMETER OF CONCRETE FILLED STEEL POST 48" ABOVE FINISH GRADE AT EACH HYDRANT AS REQUIRED.
5. FIRE LANES SHALL BE POSTED WTH "FIRE LANE - NO PARKING" SIGNS IN ACCORDANCE WITH ORDINANCE #85.99.02.

THE LOCATIONS OF EXISTING UNDERGROUND UTILITIES ARE SHOWN IN AN APPROXIMATE WAY ONLY AND HAVE NOT BEEN INDEPENDENTLY VERIFIED BY THE OWNER OR ITS REPRESENTATIVE. THE CONTRACTOR SHALL DETERMINE THE EXACT LOCATION OF ALL EXISTING UTILITIES BEFORE COMMENCING WORK, AND AGREES TO BE FULLY RESPONSIBLE FOR ANY AND ALL DAMAGES WHICH MIGHT BE OCCASIONED BY THE CONTRACTOR'S FAILURE TO EXACTLY LOCATE AND PRESERVE ANY AND ALL UNDERGROUND UTILITIES.

ALL WORK SHALL CONFORM TO CITY OF NOVI & OAKLAND COUNTY STANDARDS AND SPECIFICATIONS.

THE CONTRACTOR SHALL BE RESPONSIBLE FOR THE PROTECTION OF AND/OR RELOCATION OF ALL UTILITIES THAT MAY INTERFERE WITH CONSTRUCTION.

NOTE: SEE ESTIMATED QUANTITIES ON SHEET 10

UTILITY WARNING

UNDERGROUND UTILITY LOCATIONS AS SHOWN ON THE PLAN, WERE OBTAINED FROM UTILITY OWNER AND NOT FIELD LOCATED.

SANITARY NOTES:
1. ALL PUBLIC SANITARY SEWERS SHALL BE LOCATED WITHIN A 20' WIDE DEDICATED EASEMENT.
2. ALL SANITARY SEWER MAINS SHALL BE MINIMUM 8" PVC SDR 26 @ 0.40% MIN. SLOPE
3. ALL SANITARY SEWER LEADS SHALL BE MINIMUM 6" PVC SDR 23.5 @ 2.0% MIN. SLOPE..
4. ALL SANITARY SEWER LEADS SHALL BE A MINIMUM DEPTH OF 5' UNDER THE INFLUENCE OF PAVEMENT.
5. ALL SANITARY SEWER LEADS SHALL BE MINIMUM DEPTH OF 10' BELOW THE FINISHED GRADE OF EACH UNIT TO PROVIDE FOR GRAVITY DISCHARGE FROM BASEMENTS.
6. ALL MATERIALS SHALL CONFORM TO THE CITY OF NOVI STANDARDS AND SPECIFICATIONS.
7. A VARIABLE WIDTH ACCESS EASEMENT SHALL BE PROVIDED ALONG ALL PRIVATE ROADWAYS.
8. PROVIDE A TESTING BULKHEAD IMMEDIATELY UPSTREAM OF THE SANITARY CONNECTION POINT.

WATER MAIN NOTES:
1. ALL PUBLIC WATER MAINS AND\OR SERVICES SHALL BE LOCATED WITHIN A 20' WIDE DEDICATED EASEMENT.
2. ALLWATER MAINS SHALL BE 8" DUCTILE IRON CLASS 54.
3. ALL WATER SERVICES SHALL BE 1" "K" COPPER OR HDPE DR9 WITH TRACE WIRE. CURB STOPS TO BE PROVIDED 1' BEHIND PR. WALKS TYPICAL.
4. ALL WATER MAINS SHALL BE INSTALLED WITH 5'-6" MINIMUM COVER.
5. 18" MINIMUM SEPARATION SHALL BE PROVIDED BETWEEN WATER MAINS AND\OR SERVICE LEADS AND ALL OTHER UTILITIES.
6. ALL MATERIALS SHALL CONFORM TO THE CITY OF NOVI STANDARDS AND SPECIFICATIONS.
7. A VARIABLE WIDTH ACCESS EASEMENT SHALL BE PROVIDED ALONG ALL PRIVATE ROADWAYS.
8. ALL HYDRANTS SHALL BE PLACED A MINIMUM OF 7 FEET BEHIND BACK OF CURB.
9. ALL HYDRANTS MUST BE INSTALLED AND OPERATIONAL PRIOR TO BEGINNING BUILDING CONSTRUCTION.

NOTE:
ALL PROPOSED 4" SCH 40 PVC STORM LEADS SHALL BE SLOPED A MINIMUM OF 1%

54A	Matherton sandy loam, 0 to 3 percent slopes
40A	Udorthents, loamy, nearly level

MAINTENANCE REQUIREMENTS
- STREET SCRAPING (DAILY)
- STREET SWEEPING (WEEKLY MINIMUM)
- STRUCTURAL SEDIMENT CONTROLS (SILT FENCE, INLET FILTERS, SEDIMENT TRAPS) INSPECT AND MAINTAIN ON A WEEKLY BASIS UNTIL SITE IS STABILIZED. RECORD SITE CONDITIONS AND NECESSARY REPAIRS IN A LOGBOOK ONCE A WEEK AND WITHIN 24 HOURS AFTER A STORM EVENT IF REQUIRED BY THE NPDES PERMIT (5 ACRES OR GREATER IN SIZE).

CONSTRUCTION NOTES
ANY EXISTING TELEPHONE LINES TO BE RELOCATED MUST BE REPLACED WITH UNDERGROUND LINES.

VIOLATIONS/CITATIONS

1. ROUTINE INSPECTIONS WILL BE PERFORMED ON YOUR PROJECT BY THE CITY OF NOVI OR IT'S AGENT ONCE A WEEK.
2. UPON COMPLETION OF INSPECTION, THE SITE IS FOUND NOT IN COMPLIANCE WITH THE CITY OF NOVI'S SOIL EROSION AND SEDIMENTATION CONTROL ORDINANCE, THEN THE PERMIT HOLDER/SIGNER WILL BE ISSUED, BY HAND, MAIL OR FAX, A "NOTICE OF EROSION CONTROL DEFICIENCE" LETTER, THAT WILL INCLUDE ALL CURRENT AND PERTINENT NON-COMPLIANCE ITEMS. THE TIME AND/OR DEVELOPMENT WILL HAVE PRE-DETERMINED AMOUNT OF TIME, FROM THE DATE OF THE "NOTICE" TO RECTIFY THESE ITEMS.
3. IF ALL OF THE ITEMS HAVE NOT BEEN ADDRESSED AFTER THE ELAPSED TIME SPECIFIED, THE PERMIT HOLDER/SIGNER WILL RECEIVE A "NON-COMPLIANCE" LETTER, WHICH WILL INCLUDE A "NOTICE TO SHOW CAUSE."
4. UPON RECEIPT OF THE "NON-COMPLIANCE" LETTER AND "NOTICE TO SHOW CAUSE," THE PERMIT HOLDER/SIGNER WILL ATTEND A SHOW CAUSE HEARING AS WELL AS PAY A RE-INSPECTION FEE IN THE AMOUNT OF $250.00 TO THE CITY OF NOVI FOR ADDITIONAL INSPECTIONS, HEARINGS AND/OR REPORT FOLLOW-UP. THE BEFORE MENTIONED ACTIVITIES MUST TAKE PLACE WITHIN 24 HOURS UPON RECEIPT OF THE LETTER. AFTER THE HEARING, THE PROJECT/DEVELOPMENT MAY BE ISSUED A "STOP WORK" ORDER.
5. IF A CITATION IS ISSUED TO THE PERMIT HOLDER/SIGNER AFTER THE SHOW CAUSE HEARING, AND ADDITIONAL $400.00 WILL BE PAID TO THE CITY OF NOVI, FOR FOLLOW-UP INSPECTIONS, MEETINGS AND OTHER EXPENSES INCURRED.SILT FENCE

6	SEEDING W/LCH AND/OR MATTING	FACILITATES ESTABLISHMENT OF VEGETATIVE COVER EFFECTIVE FOR DRAINAGEWAYS WITH LOW VELOCITY EASILY PLACED IN SMALL QUANTITIES BY INEXPERIENCED PERSONNEL SHOULD INCLUDE PREPARED TOPSOIL BED
7	HYDRO-SEEDING	EFFECTIVE ON LARGE AREAS MULCH TACKING AGENT USED TO PROVIDE IMMEDIATE PROTECTION UNTIL GRASS IS ROOTED SHOULD INCLUDE PREPARED TOPSOIL BED
15	PAVING	PROTECTS AREAS WHICH CANNOT OTHERWISE BE PROTECTED, BUT INCREASES RUNOFF VOLUME AND VELOCITY IRREGULAR SURFACE WILL HELP SLOPE VELOCITY
16	CURB AND GUTTER	KEEPS HIGH VELOCITY RUNOFF ON PAVED AREAS FROM LEAVING THE PAVED SURFACE COLLECTS AND CONDUCTS RUNOFF TO ENCLOSED DRAINAGE SYSTEM OR PREPARED DRAINAGEWAY
36	CATCH BASIN, DRAIN INLET	COLLECTS HIGH VELOCITY CONCENTRATED RUNOFF MAY USE FILTER CLOTH OVER INLET
54	FILTER FENCING	USES GEOTEXTILE FABRIC AND POSTS OR POLES EASY TO CONSTRUCT AND LOCATE AS NECESSARY

NOTES:
1. PROVIDE FILTER ON STANDPIPE OUTLET STRUCTURE UNTIL SITE IS STABILIZED, THEN REMOVE.
2. THE STORM WATER BASIN WILL BE STABILIZED PRIOR TO DIRECTING FLOW TO BASIN.
3. A RING OF SILT FENCE WILL BE INSTALLED SURROUNDING ANY STOCKPILE MATERIAL.

SIDEWALK NOTE:
SIDEWALK WITHIN RIGHT-OF-WAY SHALL MATCH EXISTING GRADE AT BOTH ENDS OF PROJECT AREA.

NOTE "A":
TEMPORARY SILT FENCE TO BE INSTALLED FOR CONSTRUCTION OF RETAINING WALLS & SHALL BE REMOVED AFTER COMPLETION OF RETAINING WALL CONSTRUCTION. PERMANENT SILT FENCE SHALL BE PLACED AS SHOWN. NO ADDITIONAL TREE REMOVAL SHALL TAKE PLACE FOR INSTALLATION OF TEMPORARY SILT FENCE AND NO GRADING SHALL BE DONE BETWEEN THE TEMPORARY SILT FENCE & SILT FENCE AS ORIGINALLY PROPOSED.

DISTURBED AREA ±3.93 ACRES
±53.3% UNDISTURBED

LOCATION MAP
1"=4000'

NORTH
40' 0 20' 40' 80' 160'
(IN FEET)
1 inch = 40' ft.

NOTES:
IF DEWATERING IS ENCOUNTERED DURING CONSTRUCTION A DEWATERING PLAN MUST BE SUBMITTED TO THE ENGINEERING DIVISION FOR REVIEW AND APPROVAL.

IT IS THE DEVELOPER'S RESPONSIBILITY TO GRADE AND STABILIZE DISTURBANCES DUE TO THE INSTALLATION OF PUBLIC UTILITIES.

CATCH BASIN INLET FILTERS SHALL BE INSTALLED ON EXISTING ROADWAYS ALONG CONSTRUCTION ROUTE FOR A REASONABLE DISTANCE FROM SITE.

STREET SWEEPING AND DUST CONTROL ARE THE RESPONSIBILITY OF THE CONTRACTOR AND SHALL BE DONE AS NEEDED OR DIRECTED BY THE ENGINEER AND\OR CITY STAFF.

VEGETATION SHALL BE ESTABLISHED WITHIN 5 DAYS OF FINAL GRADE, OR WHENEVER DISTURBED AREAS WILL REMAIN UNCHANGED FOR 30 DAYS OR GREATER. 3-4" OF TOPSOIL WILL BE USED WHERE VEGITATION IS REQUIRED.

DIVERSION BERMS OR TERRACING SHALL BE IMPLEMENTED WHERE NECESSARY OR DIRECTED BY THE ENGINEER AND\OR COUNTY STAFF.

CONTRACTOR SHALL OBTAIN SOIL EROSION PERMIT PRIOR TO ANY CONSTRUCTION.

ALL GRADING, EROSION, AND SEDIMENT CONTROL AND RELATED WORK UNDERTAKEN ON THIS SITE SHALL BE IN ACCORDANCE WITH LOCAL JURISDICTION.

CONTRACTOR SHALL MAINTAIN ALL SOIL EROSION CONTROL MEASURES. THE SOIL EROSION CONTROLS WILL BE MAINTAINED WEEKLY AND AFTER EVERY STORM EVENT BY J&M SILT FENCE. SURROUNDING PAVED AREAS SHALL BE POWER BROOMED AS NECESSARY TO REMOVE MUD TRACKING FROM THE SITE.

THE CONTRACTOR SHALL BE RESPONSIBLE FOR MATCHING EXISTING FACILITIES TO AVOID ANY ABRUPT OR APPARENT CHANGES IN GRADES OR CROSS SLOPES, LOW SPOTS, OR HAZARDOUS CONDITIONS.

GRADING AT THE BOUNDARIES SHALL BE DONE SO AS NOT TO OBSTRUCT THE RUNOFF OF STORM WATER FROM ADJACENT PROPERTIES.

SOD AND HYDROSEEDING SHALL BE DONE IN ACCORDANCE WITH THE LANDSCAPING PLAN. ALL OTHER DISTURBED AREAS SHALL BE TOPSOILED, HYDROSEEDED, FERTILIZED AND MULCHED.

THE CONTRACTOR IS REQUIRED TO HAVE A COPY OF THE CERTIFIED PLAN AT THE CONSTRUCTION SITE.

ALL SOIL EROSION CONTROL PRACTICES TO BE INSTALLED PRIOR TO ANY MAJOR SOIL DISTURBANCE, OR IN THEIR PROPER SEQUENCE AND MAINTAINED FOR ONE YEAR AFTER COMPLETION OF THE APPROVED PLAN OR UNTIL SUCH MEASURES ARE PERMANENTLY STABILIZED AS DETERMINED BY THE TOWNSHIP ENGINEER.

PERMANENT VEGETATION TO BE SEEDED ON ALL EXPOSED AREAS WITHIN TEN (10) DAYS AFTER FINAL GRADING. MULCH TO BE USED AS NECESSARY FOR PROTECTION UNTIL SEEDING IS ESTABLISHED.

IMMEDIATELY FOLLOWING INITIAL DISTURBANCE OR ROUGH GRADING, ALL CRITICAL AREAS SUBJECT TO EROSION (I.E., STEEP SLOPES) WILL RECEIVE APPROPRIATE VEGETATIVE COVER AS STATED IN THE CONSTRUCTION SEQUENCE.

DURING CONSTRUCTION, ANY ADDITIONAL CONTROL MEASURES AS DEEMED NECESSARY TO PREVENT EROSION OR CONTROL SEDIMENT BEYOND THOSE MEASURES SHOWN ON THE APPROVED PLANS SHALL BE INSTALLED OR EMPLOYED AT THE DIRECTION OF THE ENGINEER.

SLOPES STEEPER THAN 1V:6H SHALL BE STABILIZED WITH EROSION CONTROL BLANKET.

INSTALLATION OF SILT FENCE OR TREE PROTECTION FENCE SHALL NOT OCCUR PRIOR TO THE INITIAL CITY PRE-CONSTRUCTION MEETING. WHEN NATURAL FEATURES EXIST ON THE SITE, INSPECTION OF STAKING MAY BE REQUIRED PRIOR TO INSTALLATION OF THE FENCING.

SEQUENCE OF CONSTRUCTION FOR SOIL EROSION CONTROL

1. ATTEND AN PRE-CONSTRUCTION MEETING AT CITY OF NOVI OFFICE ALONG WITH THE APPROPRIATE CITY OF NOVI STAFF.
2. INSTALL SILTATION FENCE, OUTLET FILTERS, AND CONSTRUCTION ACCESS ROAD AS SHOWN ON THE SOIL EROSIONCONTROL PLAN.
3. STRIP AND STOCKPILE TOPSOIL.
4. CONSTRUCT DETENTION BASIN, UNDERGROUND DETENTION & CMP ARCH PIPE CULVERT AND INSTALL STORM SEWER PIPE, STRUCTURES AND SOIL STABILIZATION WITHIN SEDIMENT BASIN. (PERMANENT)
5. MASS GRADE AS REQUIRED.
6. INSTALL SANITARY SEWERS AND WATER MAINS.
7. COMPLETE STORM SEWER INSTALLATION; IMMEDIATELY INSTALL STONE FILTERS ON ALL CATCH BASINS AND INLETS. (TEMPORARY)
8. INSTALL ALL PUBLIC UTILITIES COMPLETE (GAS, ELECTRIC, TELEPHONE, AND CABLE TV).
9. INSTALL ALL PAVEMENT.
10. INSTALL SILTATION FENCE ALONG ROADSIDES WHERE YARDS SLOPE TOWARD ROADS. (TEMPORARY)
11. REPAIR AND/OR REPLACE ALL LOW POINT CATCH BASIN FILTERS AS NEEDED.(TEMPORARY)
12. FINISH GRADE, REDISTRIBUTE TOP SOIL, AND ESTABLISH VEGETATION ON ALL DISTURBED GROUND AREAS. COMPLETE LANDSCAPING. PRIOR TO INDIVIDUAL LOT DEVELOPMENT, ALL AREAS BETWEEN SIDEWALKS AND ROADS NEED TO BE PERMANENTLY STABILIZED.
13. CLEAN PAVEMENT AND STORM SEWERS OF ALL SEDIMENT.
14. REMOVE TEMPORARY SOIL EROSION CONTROL MEASURES AFTER PERMANENT VEGETATION HAS BEEN ESTABLISHED.
15. IT IS THE RESPONSIBILITY OF THE DEVELOPER TO INSURE THAT ALL SOIL EROSION CONTROL MEASURES ARE INSTALLED AND MAINTAINED.
16. CITY OF NOVI OR ITS AGENT SHALL INSPECT ALL SOIL EROSION CONTROL MEASURES. UPON THEIR DIRECTION, ADDITIONAL MEASURES SHALL BE CONSTRUCTED OR MAINTENANCE WORK SHALL BE PERFORMED TO ASSURE PROPER EROSION AND SEDIMENTATION CONTROL. REMOVAL OF CONTROL MEASURES MAY ONLY TAKE PLACE ONE ENTIRE SITE IS FULLY STABILIZED.
17. DUST MUST BE CONTROLLED AT ALL TIMES.
18. ALL MUD TRACKED ON PUBLIC ROADS AND INTERIOR ROADS SHALL BE REMOVED DAILY.

THE LOCATIONS OF EXISTING UNDERGROUND UTILITIES ARE SHOWN IN AN APPROXIMATE WAY ONLY AND HAVE NOT BEEN INDEPENDENTLY VERIFIED BY THE OWNER OR ITS REPRESENTATIVE. THE CONTRACTOR SHALL DETERMINE THE EXACT LOCATION OF ALL EXISTING UTILITIES BEFORE COMMENCING WORK, AND AGREES TO BE FULLY RESPONSIBLE FOR ANY AND ALL DAMAGES WHICH MIGHT BE OCCASIONED BY THE CONTRACTOR'S FAILURE TO EXACTLY LOCATE AND PRESERVE ANY AND ALL UNDERGROUND UTILITIES.

811 Know what's below. Call before you dig.

CONSTRUCTION SITE SAFETY IS THE RESPONSIBILITY OF THE CONTRACTOR. NEITHER THE OWNER NOR THE ENGINEER SHALL BE EXPECTED TO ASSUME ANY RESPONSIBILITY FOR SAFETY OF THE WORK, OF PERSONS ENGAGED IN THE WORK, OF ANY NEARBY STRUCTURES, OR OF ANY OTHER PERSONS.

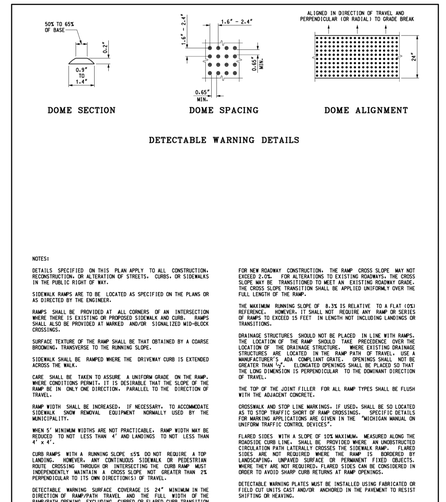
MDOT	DEPARTMENT DIRECTOR: Kirk T. Steudle	MICHIGAN DEPARTMENT OF TRANSPORTATION BUREAU OF DEVELOPMENT STANDARD PLAN FOR	
PREPARED BY: DESIGN DIVISION	APPROVED BY: DIRECTOR, BUREAU OF FIELD SERVICES	SIDEWALK RAMP AND DETECTABLE WARNING DETAILS	
DRAWN BY: R.L.T.	APPROVED BY: DIRECTOR, BUREAU OF DEVELOPMENT		
CHECKED BY: R.T.F.		T.R.N.A. APPROVAL: 12-11-2017 PLAN DATE	R-28-J SHEET 1 OF 7



NOTES:

DETAILS SPECIFIED ON THIS PLAN APPLY TO ALL CONSTRUCTION: RECONSTRUCTION, OR ALTERATION OF STREETS, CURBS, OR SIDEWALKS IN THE PUBLIC RIGHT OF WAY.

SIDEWALK RAMPS ARE TO BE LOCATED AS SPECIFIED ON THE PLANS OR AS DIRECTED BY THE ENGINEER.

RAMPS SHALL BE PROVIDED AT ALL CORNERS OF AN INTERSECTION WHERE THERE IS EXISTING OR PROPOSED SIDEWALK AND CURB. RAMPS SHALL ALSO BE PROVIDED AT MARKED AND/OR SIGNALIZED MID-BLOCK CROSSINGS.

SURFACE TEXTURE OF THE RAMP SHALL BE THAT OBTAINED BY A COARSE BROOMING, TRANSVERSE TO THE RUNNING SLOPE.

SIDEWALK SHALL BE RAMPED WHERE THE DRIVEWAY CURB IS EXTENDED ACROSS THE WALK.

CARE SHALL BE TAKEN TO ASSURE A UNIFORM GRADE ON THE RAMP, WHERE CONDITIONS PERMIT, IT IS DESIRABLE THAT THE SLOPE OF THE RAMP BE IN ONLY ONE DIRECTION, PARALLEL TO THE DIRECTION OF TRAVEL.

RAMP WIDTH SHALL BE INCREASED, IF NECESSARY, TO ACCOMMODATE SIDEWALK SNOW REMOVAL EQUIPMENT NORMALLY USED BY THE MUNICIPALITY.

WHEN 5' MINIMUM WIDTHS ARE NOT PRACTICABLE, RAMP WIDTH MAY BE REDUCED TO NOT LESS THAN 4' AND LANDINGS TO NOT LESS THAN 4'x4'.

CURB RAMPS WITH A RUNNING SLOPE ≤5% DO NOT REQUIRE A TOP LANDING. HOWEVER, ANY CONTINUOUS SIDEWALK OR PEDESTRIAN ROUTE CROSSING THROUGH OR INTERSECTING THE CURB RAMP MUST INDEPENDENTLY MAINTAIN A CROSS SLOPE NOT GREATER THAN 2% PERPENDICULAR TO ITS OWN DIRECTION(S) OF TRAVEL.

DETECTABLE WARNING SURFACE COVERAGE IS 24" MINIMUM IN THE DIRECTION OF RAMP/PATH TRAVEL AND THE FULL WIDTH OF THE RAMP/PATH OPENING EXCLUDING CURBED OR FLARED CURB TRANSITION AREAS. A BORDER OFFSET NOT GREATER THAN 3" MEASURED ALONG THE EDGES OF THE DETECTABLE WARNING IS ALLOWABLE. FOR RADIAL CURB THE OFFSET IS MEASURED FROM THE ENDS OF THE RADIUS.

FOR NEW ROADWAY CONSTRUCTION, THE RAMP CROSS SLOPE MAY NOT EXCEED 2.0%. FOR ALTERATIONS TO EXISTING ROADWAYS, THE CROSS SLOPE SHALL BE DESIGNED TO MEET AN EXISTING ROADWAY GRADE. THE CROSS SLOPE TRANSITION SHALL BE APPLIED UNIFORMLY OVER THE FULL LENGTH OF THE RAMP.

THE MAXIMUM RUNNING SLOPE OF 8.3% IS RELATIVE TO A FLAT (0%) REFERENCE. HOWEVER, IT SHALL NOT REQUIRE ANY RAMP OR SERIES OF RAMPS TO EXCEED 15 FEET IN LENGTH NOT INCLUDING LANDINGS OR TRANSITIONS.

DRAINAGE STRUCTURES SHOULD NOT BE PLACED IN LINE WITH RAMPS. THE LOCATION OF THE RAMP SHOULD TAKE PRECEDENCE OVER THE LOCATION OF THE DRAINAGE STRUCTURE. WHERE EXISTING DRAINAGE STRUCTURES ARE LOCATED IN THE RAMP PATH OF TRAVEL, USE A MANUFACTURED PEDESTRIAN GRATE. OPENINGS SHALL BE NO MORE THAN ½" WIDE. ELONGATED OPENINGS SHALL BE ORIENTED SO THAT THE LONG DIMENSION IS PERPENDICULAR TO THE DOMINANT DIRECTION OF TRAVEL.

THE TOP OF THE JOINT FILLER FOR ALL RAMP TYPES SHALL BE FLUSH WITH THE ADJACENT CONCRETE.

CROSSWALK AND STOP LINE MARKINGS, IF USED, SHALL BE SO LOCATED AS TO STOP TRAFFIC SHORT OF RAMP CROSSINGS. SPECIFIC DETAILS FOR MARKING APPLICATIONS ARE GIVEN IN THE "MICHIGAN MANUAL ON UNIFORM TRAFFIC CONTROL DEVICES".

FLARED SIDES WITH A SLOPE OF 10% MAXIMUM, MEASURED ALONG THE ROADSIDE CURB LINE, SHALL BE PROVIDED WHERE AN UNOBSTRUCTED CIRCULATION PATH LATERALLY CROSSES THE SIDEWALK RAMP. FLARED SIDES ARE NOT REQUIRED WHERE THE RAMP IS BORDERED BY LANDSCAPING, UNPAVED SURFACE OR PERMANENT FIXED OBJECTS, WHERE THEY ARE NOT REQUIRED, FLARED SIDES CAN BE CONSIDERED IN ORDER TO AVOID SHARP CURB RETURNS AT RAMP OPENINGS.

DETECTABLE WARNING PLATES MUST BE INSTALLED USING FABRICATED OR FIELD CUT UNITS CAST AND/OR ANCHORED IN THE PAVEMENT TO RESIST SHIFTING OR WEAVING.

UTILITY QUANTITIES

SANITARY SEWER

8" PVC SDR 26 SANITARY PIPE	1122 LF
6" PVC SDR 23.5 SANITARY LEAD	1009 LF
4" SDR11 SANITARY FORCEMAIN	84 LF
4'ø SANITARY MANHOLE	8 EA
DUPLEX PUMPING STATION	1 EA
VALVE VAULT BOX	1 EA

WATER MAIN

8" D.I. CL 54 WATER MAIN	1680 LF
6" D.I. CL54 HYD LEAD	53 LF
1" "K" COPPER WATER LEAD	1316 LF
HYDRANT & ASSEMBLY	5 EA
GATE VALVE & WELL	5 EA

NOTE:
COMPACTED SAND BACKFILL (MDOT SAND CLASS 2) SHALL BE PROVIDED FOR ALL UTILITIES WITHIN THE INFLUENCE OF PAVED AREAS.

SEE SHEET 11 FOR OVERALL EASEMENT PLAN

SEE SHEET 17 FOR SANITARY & WATER PROFILES FOR NOBLE TRAIL

SEE SHEET 18 FOR WATER PROFILES FOR BUFFINGTON, PEMBINE ST & HENNING

SEE SHEET 19 FOR OVERALL STORM SEWER PLAN

SEE SHEETS 20 & 21 FOR STORM SEWER PROFILES

SANITARY BASIS OF DESIGN

Connection to existing 8" PVC sanitary sewer along Henning St.

NUMBER OF UNITS

= 25 UNITS TOTAL

POPULATION

= 2.38 PEOPLE/UNIT X 25
= 59.5 PEOPLE

AVERAGE FLOW

= 59.5 PEOPLE X 100 GAL/CAP/DAY
= 5950 GAL/DAY
= 0.00893 CFS

PEAK FACTOR

= 18+(SQRT(P/1000))/(4+SQRT(P/1000))
= 4

PEAK FLOW

= PEAK FACTOR x AVERAGE FLOW
= 0.036 cfs

(CAPACITY OF A 8" PIPE @ 0.40% IS 0.76 CFS)
THEREFORE PIPE CAPACITY IS SUFFICIENT

SANITARY NOTES:
1. ALL PUBLIC SANITARY SEWERS SHALL BE LOCATED WITHIN A 20' WIDE DEDICATED EASEMENT.
2. ALL SANITARY SEWER MAINS SHALL BE MINIMUM 8" PVC SDR 26 @ 0.40% MIN. SLOPE
3. ALL SANITARY SEWER LEADS SHALL BE MINIMUM 6" PVC SDR 23.5 @ 2.0% MIN. SLOPE..
4. ALL SANITARY SEWER LEADS SHALL BE A MINIMUM DEPTH OF 5' UNDER THE INFLUENCE OF PAVEMENT.
5. ALL SANITARY SEWER LEADS SHALL BE MINIMUM DEPTH OF 10' BELOW THE FINISHED GRADE OF EACH UNIT TO PROVIDE FOR GRAVITY DISCHARGE FROM BASEMENTS.
6. ALL MATERIALS SHALL CONFORM TO THE CITY OF NOVI STANDARDS AND SPECIFICATIONS.
7. A 27' WIDE ACCESS EASMENT SHALL BE PROVIDED ALONG ALL PR. ROADWAYS.
8. PROVIDE A TESTING BULKHEAD IMMEDIATELY UPSTREAM OF THE SANITARY CONNECTION POINT.

WATER MAIN NOTES:
1. ALL PUBLIC WATER MAINS AND\OR SERVICES SHALL BE LOCATED WITHIN A 20' WIDE DEDICATED EASEMENT.
2. ALLWATER MAINS SHALL BE 8" DUCTILE IRON CLASS 54.
3. ALL WATER SERVICES SHALL BE 1" 'K' COPPER OR HDPE DR9 WITH TRACE WIRE. CURB STOPS TO BE PROVIDED 1' BEHIND PR. WALKS TYPICAL.
4. ALL WATER MAINS SHALL BE INSTALLED WITH 5'-6" MINIMUM COVER.
5. 18" MINIMUM SEPARATION SHALL BE PROVIDED BETWEEN WATER MAINS AND\OR SERVICE LEADS AND ALL OTHER UTILITIES.
6. ALL MATERIALS SHALL CONFORM TO THE CITY OF NOVI STANDARDS AND SPECIFICATIONS.
7. A 27' WIDE ACCESS EASMENT SHALL BE PROVIDED ALONG ALL PR. ROADWAYS.
8. ALL HYDRANTS SHALL BE PLACED A MINIMUM OF 7 FEET BEHIND BACK OF CURB.
9. ALL HYDRANTSMUST BE INSTALLED AND OPERATIONAL PRIOR TO BEGINNING BUILDING CONSTRUCTION.

NOTE:
ALL PROPOSED 4" SCH 40 PVC STORM LEADS SHALL BE SLOPED A MINIMUM OF 1%

I - GENERAL

1.0 STANDARDS AND DEFINITIONS

1.1 STANDARDS - ALL STANDARDS REFER TO LATEST EDITION UNLESS OTHERWISE NOTED.

1.1.1 ASTM B-864 "STANDARD SPECIFICATION FOR CORRUGATED ALUMINUM BOX CULVERTS" (AASHTO DESIGNATION M-219).

1.1.2 AASHTO STANDARD SPECIFICATION FOR HIGHWAY BRIDGES - SECTION 12 DIVISION I - DESIGN.

1.1.3 AASHTO STANDARD SPECIFICATION FOR HIGHWAY BRIDGES - SECTION 26DIVISION II - CONSTRUCTION.

1.2 DEFINITIONS

1.2.1 OWNER - IN THESE SPECIFICATIONS THE WORD "OWNER" SHALL MEAN CONTECH Engineered Solutions, LLC.

1.2.2 ENGINEER - IN THESE SPECIFICATIONS THE WORD "ENGINEER" SHALL MEAN THE ENGINEER OF RECORD OR OWNER'S DESIGNATED ENGINEERING REPRESENTATIVE.

1.2.3 MANUFACTURER - IN THESE SPECIFICATIONS THE WORD "MANUFACTURER" SHALL MEAN CONTECH ENGINEERED SOLUTIONS, LLC 800-338-1122 Winchester.

1.2.4 CONTRACTOR - IN THESE SPECIFICATIONS THE WORD "CONTRACTOR" SHALL MEAN THE FIRM OR CORPORATION UNDERTAKING THE EXECUTION OF ANY INSTALLATION WORK UNDER THE TERMS OF THESE SPECIFICATIONS.

1.2.5 APPROVED - IN THESE SPECIFICATIONS THE WORD "APPROVED" SHALL REFER TO THE APPROVAL OF THE ENGINEER OR HIS DESIGNATED REPRESENTATIVE.

1.2.6 AS DIRECTED - IN THESE SPECIFICATIONS THE WORDS "AS DIRECTED" SHALL REFER TO THE DIRECTIONS TO THE CONTRACTOR FROM THE OWNER OR HIS DESIGNATED REPRESENTATIVE.

2.0 GENERAL CONDITIONS

2.1 THE CONTRACTOR SHALL FURNISH ALL LABOR, MATERIAL AND EQUIPMENT AND PERFORM ALL WORK AND SERVICES EXCEPT THOSE SET OUT AND FURNISHED BY THE OWNER, NECESSARY TO COMPLETE IN A SATISFACTORY MANNER THE SITE PREPARATION, EXCAVATION, FILLING, COMPACTION, GRADING AS SHOWN ON THE PLANS AND AS DESCRIBED THEREIN. THIS WORK SHALL CONSIST OF ALL MOBILIZATION CLEARING AND GRADING, GRUBBING, STRIPPING, REMOVAL OF EXISTING MATERIAL UNLESS OTHERWISE STATED, PREPARATION OF THE LAND TO BE FILLED, FILLING OF THE LAND, SPREADING AND COMPACTION OF THE FILL AND ALL SUBSIDIARY WORK NECESSARY TO COMPLETE THE GRADING OF THE CUT AND FILL AREAS TO CONFORM WITH THE LINES, GRADES, SLOPES, AND SPECIFICATIONS. THIS WORK IS TO BE ACCOMPLISHED UNDER THE OBSERVATION OF THE OWNER OR HIS DESIGNATED REPRESENTATIVE.

2.2 PRIOR TO BIDDING THE WORK, THE CONTRACTOR SHALL EXAMINE, INVESTIGATE AND INSPECT THE CONSTRUCTION SITE AS TO THE NATURE AND LOCATION OF THE WORK, AND THE GENERAL AND LOCAL CONDITIONS AT THE CONSTRUCTION SITE, INCLUDING WITHOUT LIMITATION, THE CHARACTER OF SURFACE OR SUBSURFACE CONDITIONS AND OBSTACLES TO BE ENCOUNTERED ON AND AROUND THE CONSTRUCTION SITE AND SHALL MAKE SUCH ADDITIONAL INVESTIGATION AS HE MAY DEEM NECESSARY FOR THE PLANNING AND PROPER EXECUTION OF THE WORK.

IF CONDITIONS OTHER THAN THOSE INDICATED ARE DISCOVERED BY THE CONTRACTOR, THE OWNER SHALL BE NOTIFIED IMMEDIATELY. THE MATERIAL WHICH THE CONTRACTOR BELIEVES TO BE A CHANGED CONDITION SHALL NOT BE DISTURBED SO THAT THE OWNER CAN INVESTIGATE THE CONDITION.

2.3 THE CONSTRUCTION SHALL BE PERFORMED UNDER THE DIRECTION OF THE ENGINEER.

2.4 ALL ASPECTS OF THE STRUCTURE DESIGN AND SITE LAYOUT INCLUDING FOUNDATIONS, BACKFILL, END TREATMENTS AND NECESSARY SCOUR CONSIDERATION SHALL BE PERFORMED BY THE ENGINEER.

ANY INSTALLATION GUIDANCE PROVIDED HEREIN SHALL BE ENDORSED BY THE ENGINEER OR SUPERSEDED BY THE ENGINEER'S PLANS AND SPECIFICATIONS.

II - ALUMINUM BOX CULVERT
1.0 GENERAL
1.1 Manufacturer shall fabricate the aluminum box culvert as shown on the plans. Fabrication shall conform to the requirements of ASTM B-864 and shall consist of plates, ribs, and appurtenant items.

Plate thickness, rib spacing, end treatment and type of invert and foundation shall be as indicated on the plans. All manufacturing processes including corrugating, punching, curving and required galvanizing shall be performed within the United States of America.

1.2 The contractor shall verify all field dimensions and conditions prior to ordering materials.

2.0 DIMENSIONS
Designation: ALBC 82-R1
Span: 25'-2"
Rise: 6'-2"
Min. Cover: 2'9"
Max. Cover: 4'-0"
Loading: HL-93

2.1 The proposed structure shall be an ALUMINUM BOX CULVERT with the following dimensions:

2.2 All plan dimensions on the contract drawings are measured in a true horizontal plan unless otherwise noted.

3.0 ASSEMBLY AND INSTALLATION
3.1 Bolts and nuts shall conform to the requirements of ASTM A-307 or ASTM A-449. The box culvert shall be assembled in accordance with the plate layout drawings provided by the manufacturer and per the manufacturer's recommendations.

Bolts shall be tightened using an applied torque of between 100 and 150 ft.-lbs.

3.2 The box culvert shall be installed in accordance with the plans and specifications, the manufacturer's recommendations, and AASHTO Standard Specification for Highway Bridges - Section 26 Division II - Construction.

3.3 Trench excavation shall be made in embankment material that is structurally adequate. The trench width shall be shown on the plans. Poor quality in situ embankment material must be removed and replaced with suitable backfill as directed by the Engineer.

3.4 Bedding preparation is critical to both structure performance and service life. The bed should be constructed to uniform line and grade to avoid distortions that may create undesirable stresses in the structure and/or rapid deterioration of the roadway. The bed should be free of rock formations, protruding stones, frozen lumps, roots, and other foreign matter that may cause unequal settlement.

3.5 Bedding shall provide a minimum of 4,000 psf bearing capacity. Foundation details for bearing capacity less than 4,000 psf shall be approved by the Engineer.

3.6 The structure shall be assembled in accordance with the Manufacturer's instructions. All plates shall be unloading and handled with reasonable care. Plates shall not be rolled or dragged over gravel rock and shall be prevented from striking rock or other hard objects during placement in trench or on bedding.

When installed on a full invert or on flexible footing pads, assembly of the invert or footing pads shall start at the downstream end. Circumferential seam laps shall shingle over the top of the downstream plates as assembly progresses upstream. Whether the box culvert is installed on a concrete footing, full metal invert, or flexible footing pad, assembly of the structure shell shall start at the upstream end. Downstream rings of plates shall be assembled outside of the upstream rings. (Circumferential seams are shingled downstream when viewed from the inside of the shell).

3.7 The structure shall be backfilled using clean well graded granular material that meets the requirements for soil classifications A-1, A-2-4, A-2-5 or A-3 modified to be more select than AASHTO M-145. See the information at the right of this sheet.

Backfill must be placed symmetrically on each side of the structure in 6 to 8 inch loose lifts. Each lift shall be compacted to a minimum of 90 percent density per AASHTO T-180

3.8 Construction loads that exceed highway load limits are not allowed to cross the structure without approval from the Engineer.

Normal highway traffic is not allowed to cross the structure until the structure has been backfilled and paved. If the road is unpaved, cover allowance to accommodate rutting shall be as directed by the Engineer.

SPECIFICATIONS FOR MANUFACTURE AND INSTALLATION OF CONTECH® ALUMINUM BOX CULVERT #1-87

I - GENERAL

1.0 STANDARDS AND DEFINITIONS

1.1 STANDARDS - All standards refer to latest edition unless otherwise noted.

1.1.1 ASTM B-864 "Standard Specification for Corrugated Aluminum Box Culverts" (AASHTO Designation M-219).

1.1.2 AASHTO Standard Specification for Highway Bridges - Section 12 Division I - Design.

1.1.3 AASHTO Standard Specification for Highway Bridges - Section 26 Division II - Construction.

1.2 DEFINITIONS

1.2.1 Owner - In these specifications the word "Owner" shall mean OWNER

1.2.2 Engineer - In these specifications the word "Engineer" shall mean the Engineer of Record or Owner's designated engineering representative.

1.2.3 Manufacturer - In these specifications the word "Manufacturer" shall mean CONTECH ENGINEERED SOLUTIONS 800-338-1122 REP

1.2.4 Contractor - In these specifications the word "Contractor" shall mean the firm or corporation undertaking the execution of any installation work under the terms of these specifications.

1.2.5 Approved - In these specifications the word "approved" shall refer to the approval of the Engineer or his designated representative.

1.2.6 As Directed - In these specifications the words "as directed" shall refer to the directions to the Contractor from the Owner or his designated representative.

2.0 GENERAL CONDITIONS

2.1 The Contractor shall furnish all labor, material and equipment and perform all work and services except those set out and furnished by the Owner, necessary to complete in a satisfactory manner the site preparation, excavation, filling, compaction, grading as shown on the plans and as described therein. This work shall consist of all mobilization clearing and grading, grubbing, stripping, removal of existing material unless otherwise stated, preparation of the land to be filled, filling of the land, spreading and compaction of the fill, and all subsidiary work necessary to complete the grading of the cut and fill areas to conform with the lines, grades, slopes, and specifications. This work is to be accomplished under the observation of the Owner or his designated representative.

2.2 Prior to bidding the work, the Contractor shall examine, investigate and inspect the construction site as to the nature and location of the work, and the general and local conditions at the construction site, including without limitation, the character of surface or subsurface conditions and obstacles to be encountered on and around the construction site and shall make such additional investigation as he may deem necessary for the planning and proper execution of the work.

If conditions other than those indicated are discovered by the Contractor, the Owner shall be notified immediately. The material which the Contractor believes to be a changed condition shall not be disturbed so that the owner can investigate the condition.

2.3 The construction shall be performed under the direction of the Engineer.

2.4 All aspects of the structure design and site layout including foundations, backfill, end treatments and necessary scour consideration shall be performed by the Engineer.

Any installation guidance provided herein shall be endorsed by the Engineer or superseded by the Engineer's plans and specifications.

II - ALUMINUM BOX CULVERT

1.0 GENERAL

1.1 Manufacturer shall fabricate the aluminum box culvert as shown on the plans. Fabrication shall conform to the requirements of ASTM B-864 and shall consist of plates, ribs, and appurtenant items.

Plate thickness, rib spacing, end treatment and type of invert and foundation shall be as indicated on the plans. All manufacturing processes including corrugating, punching, curving and required galvanizing shall be performed within the United States of America.

1.2 The contractor shall verify all field dimensions and conditions prior to ordering materials.

2.0 DIMENSIONS

2.1 The proposed structure shall be an ALUMINUM BOX CULVERT with the following dimensions:

Span: 25'-2"	Rise: 6'-2"	Loading: HL-93
Haunch Gage: 0.125	Crown Gage: 0.125	Min. Cover: 2'9"
Haunch Rib Type: TYPE VI	Crown Rib Type: TYPE VI	Max. Cover: 4'-0"
Haunch Rib Spacing: 18"	Crown Rib Spacing: 9"	

2.2 All plan dimensions on the contract drawings are measured in a true horizontal plan unless otherwise noted.

3.0 ASSEMBLY AND INSTALLATION

3.1 Bolts and nuts shall conform to the requirements of ASTM A-307 or ASTM A-449. The box culvert shall be assembled in accordance with the plate layout drawings provided by the manufacturer and per the manufacturer's recommendations.

Bolts shall be tightened using an applied torque of between 100 and 150 ft.-lbs.

3.2 The box culvert shall be installed in accordance with the plans and specifications, the manufacturer's recommendations, and AASHTO Standard Specification for Highway Bridges - Section 26 Division II - Construction.

3.3 Trench excavation shall be made in embankment material that is structurally adequate. The trench width shall be shown on the plans. Poor quality in situ embankment material must be removed and replaced with suitable backfill as directed by the Engineer.

3.4 Bedding preparation is critical to both structure performance and service life. The bed should be constructed to uniform line and grade to avoid distortions that may create undesirable stresses in the structure and/or rapid deterioration of the roadway. The bed should be free of rock formations, protruding stones, frozen lumps, roots, and other foreign matter that may cause unequal settlement.

3.5 Bedding shall provide a minimum of 4,000 psf bearing capacity. Foundation details for bearing capacity less than 4,000 psf shall be approved by the Engineer.

3.6 The structure shall be assembled in accordance with the Manufacturer's instructions. All plates shall be unloading and handled with reasonable care. Plates shall not be rolled or dragged over gravel rock and shall be prevented from striking rock or other hard objects during placement in trench or on bedding.

When installed on a full invert or on flexible footing pads, assembly of the invert or footing pads shall start at the downstream end. Circumferential seam laps shall shingle over the top of the downstream plates as assembly progresses upstream. Whether the box culvert is installed on a concrete footing, full metal invert, or flexible footing pad, assembly of the structure shell shall start at the upstream end. Downstream rings of plates shall be assembled outside of the upstream rings. (Circumferential seams are shingled downstream when viewed from the inside of the shell).

3.7 The structure shall be backfilled using clean well graded granular material that meets the requirements for soil classifications A-1, A-2-4, A-2-5 or A-3 modified to be more select than AASHTO M-145. See the information at the right of this sheet.

Backfill must be placed symmetrically on each side of the structure in 6 to 8 inch loose lifts. Each lift shall be compacted to a minimum of 90 percent density per AASHTO T-180

3.8 Construction loads that exceed highway load limits are not allowed to cross the structure without approval from the Engineer.

Normal highway traffic is not allowed to cross the structure until the structure has been backfilled and paved. If the road is unpaved, cover allowance to accommodate rutting shall be as directed by the Engineer.

GROUP CLASSIFICATION	A-1	A-3	A-2-4	A-2-5
Sieve Analysis Percent Passing				
No. 10 (2.000 mm)		----	----	----
No. 40 (0.425 mm)	50 max.	51 max.	----	----
No. 100 (0.150 mm)	----	----	50 max.	50 max.
No. 200 (0.075 mm)	25 max.	10 max.	20 max.	20 max.
Atterberg Limits for Fraction Passing No., 40 (0.425 mm)				
Liquid Limits	----	----	40 max.	41 max.
Plasticity Index	6 max.	Non Plastic	10 max.	10 max.
Usual Materials	Stone Fragment, Gravel and Sand	Sand	Silty or Clayey Gravel and Sand	

NOTE: Atterberg Limits are modified to provide material that are primarily granular

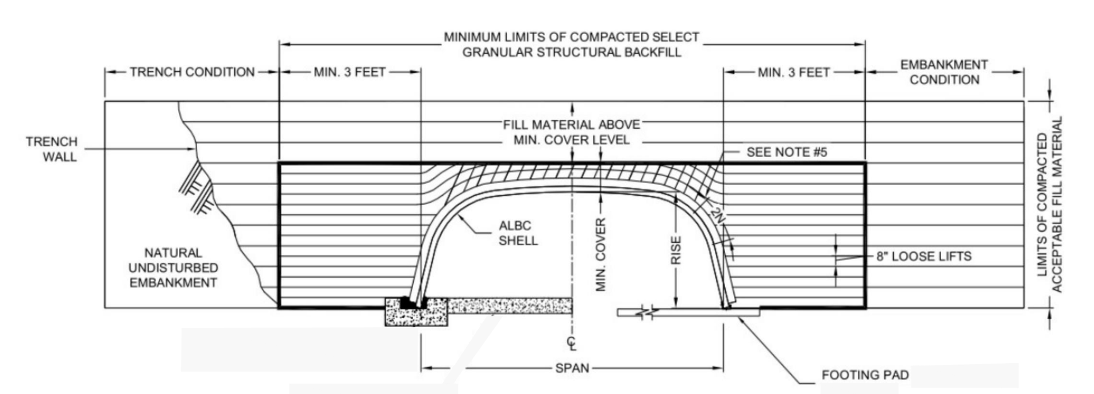
Project No.: 6164035525 | Seq. No.: 925 | Date: 12/3/2019
Sheet No.: 7 OF 8



SECTION

SELECT GRANULAR STRUCTURAL BACKFILL LIMITS.

INITIAL LIFTS OVER THE CROWN OF STRUCTURE AS INDICATED BY SHADED AREA TO BE COMPACTED TO REQUIRED DENSITY WITH HAND OPERATED EQUIPMENT OR WITH LIGHTWEIGHT(D-4 OR LIGHTER) EQUIPMENT.

NOTES:

1. TRENCH WIDTH OTHER THAN 3 FEET SHALL BE BY DIRECTION OF THE ENGINEER.
2. ALL SELECT GRANULAR BACKFILL TO BE PLACED IN A BALANCED FASHION IN THIN LIFTS (8" LOOSE TYPICALLY) AND COMPACTED TO 90 PERCENT DENSITY PER AASHTO T-180.
3. COMPLETE AND REGULAR MONITORING OF THE ALUMINUM BOX CULVERT STRUCTURE IS NECESSARY DURING THE ENTIRE BACKFILL PROCESS TO AT LEAST THE MINIMUM COVER LEVEL.
4. PREVENT DISTORTION OF SHAPE AS NECESSARY BY VARYING COMPACTION METHODS AND EQUIPMENT.
5. PLACE SELECT GRANULAR BACKFILL IN RADIAL LIFTS 2N (APPROXIMATELY 2 LIFTS) ABOVE THE HAUNCH RADIUS CHANGE.

ADDITIONAL SELECT GRANULAR STRUCTURAL BACKFILL NOTES:

SATISFACTORY BACKFILL MATERIAL, PROPER PLACEMENT, AND COMPACTION ARE KEY FACTORS IN OBTAINING MAXIMUM STRENGTH AND STABILITY.

THE BACKFILL MATERIAL SHOULD BE FREE OF ROCKS, FROZEN LUMPS, AND FOREIGN MATERIAL THAT COULD CAUSE HARD SPOTS OR DECOMPOSE TO CREATE VOIDS. BACKFILL MATERIAL SHOULD BE WELL GRADED GRANULAR MATERIAL THAT MEETS THE REQUIREMENTS OF AASHTO M-145 FOR SOIL CLASSIFICATIONS A-1, A-2-4, A-2-5, OR A-3 MODIFIED.

SEE THE STRUCTURAL PLATE BACKFILL GROUP CLASSIFICATION TABLE ON THIS SHEET. BACKFILL MUST BE PLACED SYMMETRICALLY ON EACH SIDE OF THE STRUCTURE IN 8" LOOSE LIFTS. EACH LIFT IS TO BE COMPACTED TO A MINIMUM OF 90% DENSITY PER AASHTO T-180.

A HIGH PERCENTAGE OF SILT OR FINE SAND IN THE NATIVE SOILS SUGGESTS THE NEED FOR A WELL GRADED GRANULAR BACKFILL MATERIAL TO PREVENT SOIL MIGRATION. IF THE PROPOSED BACKFILL IS NOT A WELL-GRADED MATERIAL, A NON-WOVEN GEOTEXTILE FILTER FABRIC SHALL BE PLACED BETWEEN THE SELECT BACKFILL AND THE IN SITU MATERIAL.

DURING BACKFILL, ONLY LIGHTWEIGHT TRACKED VEHICLES (D-4 OR LIGHTER) SHOULD BE NEAR THE STRUCTURE AS FILL PROGRESSES ABOVE THE CROWN AND TO THE FINISHED GRADE. THE ENGINEER AND CONTRACTOR ARE CAUTIONED THAT THE MINIMUM COVER MAY NEED TO BE INCREASED TO HANDLE TEMPORARY CONSTRUCTION VEHICLE LOADS (HEAVIER THAN D-4).

STRUCTURAL PLATE BACKFILL GROUP CLASSIFICATION, REFERENCE AASHTO M-145

GROUP CLASSIFICATION	A-1-a	A-1-b	A-2-4	A-2-5	A-3
Sieve Analysis Percent Passing					
No. 10 (2.000 mm)	50 max.	----	----	----	----
No. 40 (0.425 mm)	30 max.	50 max.	----	----	51 max.*
No. 200 (0.075 mm)	15 max.	25 max.	35 max.	35 max.	10 max.
Atterberg Limits for Fraction Passing No. 40 (0.425 mm)					
Liquid Limits	----	----	40 max.	41 min.	----
Plasticity Index	6 max.	6 max.	10 max.	10 max.	Non Plastic
Usual Materials	Stone Fragment, Gravel and Sand		Silty or Clayey Gravel and Sand		Coarse Sand

*Modified from M-145.

Fine beach sands, windblown sands, stream deposited sands, etc., exhibiting fine, rounded particles and typically Classified by AASHTO M-145 as A-3 materials should not be used.

Reference the most current version of ASTM D2487, Standard Practice for Classification of Soils for Engineering Purposes (Unified Soil Classification System), for comparable soil groups.

1.0 STANDARDS AND DEFINITIONS

1.1 STANDARDS - All standards refer to the current ASTM/AASHTO edition unless otherwise noted.

1.1.1 ASTM B864 "Standard Specification for Corrugated Aluminum Box Culverts" (AASHTO Designation M-219).

1.1.2 AASHTO Standard Specification for Highway Bridges - Section 12 Division I - Design, AASHTO LRFD Bridge Design Specifications Section 12.

1.1.3 AASHTO Standard Specification for Highway Bridges - Section 26 Division II - Construction, AASHTO LRFD Bridge Construction Specifications - Section 26. ASTM B789, Standard Practice for Installing Corrugated Aluminum Structural Plate Pipe.

1.2 DEFINITIONS

1.2.1 Owner - In these specifications the word "Owner" shall mean ############.

1.2.2 Engineer - In these specifications the word "Engineer" shall mean the Engineer of Record or Owner's designated engineering representative.

1.2.3 Manufacturer - In these specifications the word "Manufacturer" shall mean CONTECH ENGINEERED SOLUTIONS 800-338-1122 ##########.

1.2.4 Contractor - In these specifications the word "Contractor" shall mean the firm or corporation undertaking the execution of any installation work under the terms of these specifications.

1.2.5 Approved - In these specifications the word "approved" shall refer to the approval of the Engineer or his designated representative.

1.2.6 As Directed - In these specifications the words "as directed" shall refer to the directions to the Contractor from the Owner or his designated representative.

2.0 GENERAL CONDITIONS

2.1 Any installation guidance provided herein shall be endorsed by the engineer; discrepancies herein are governed by the Engineer's plans and specifications.

2.2 The Contractor shall furnish all labor, material and equipment and perform all work and services except those set out and furnished by the Owner, necessary to complete in a satisfactory manner the site preparation, excavation, filling, compaction, grading as shown on the plans and as described therein. This work shall consist of all mobilization clearing and grading, grubbing, stripping, removal of existing material unless otherwise stated, preparation of the land to be filled, filling of the land, spreading and compaction of the fill, and all subsidiary work necessary to complete the grading of the cut and fill areas to conform with the lines, grades, slopes, and specifications. This work is to be accomplished under the observation of the Owner or his designated representative.

2.3 Prior to bidding the work, the Contractor shall examine, investigate and inspect the construction site as to the nature and location of the work, and the general and local conditions at the construction site, including without limitation, the character of surface or subsurface conditions and obstacles to be encountered on and around the construction site and shall make such additional investigation as he may deem necessary for the planning and proper execution of the work.

If conditions other than those indicated are discovered by the Contractor, the Owner shall be notified immediately. The material which the Contractor believes to be a changed condition shall not be disturbed so that the owner can investigate the condition.

2.4 The construction shall be performed under the direction of the Engineer.

2.5 All aspects of the structure design and site layout including foundations, backfill, end treatments and necessary scour consideration shall be performed by the Engineer.

3.0 ASSEMBLY AND INSTALLATION

3.1 Bolts and nuts shall conform to the requirements of ASTM A307 and/or ASTM A449. The box culvert structure shall be assembled in accordance with the plate layout drawings provided by the Manufacturer and per the Manufacturer's recommendations.

Bolts shall be tightened using an applied torque of between 100 and 150 ft.-lbs.

3.2 The box culvert structure shall be installed in accordance with the plans and specifications, the Manufacturer's recommendations, and AASHTO Standard Specification for Highway Bridges - Section 26 Division II - Construction/AASHTO LRFD Bridge Construction Specifications - Section 26.

3.3 Trench excavation shall be made in embankment material that is structurally adequate. The trench width shall be shown on the plans. Poor quality in situ embankment material must be removed and replaced with suitable backfill as directed by the Engineer.

3.4 Aluminum Box Culvert designs require a minimum allowable soil-bearing pressure of 4,000 psf. Lower bearing capacities may be accommodated with a site specific design for an aluminum foundation or a concrete footing.

If the Engineer determines the natural foundation is inadequate to support the structure's backfill, the poor material shall be excavated, removed and replaced to a suitable depth with competent material. The specific depth of excavation required may be reduced by utilizing a geosynthetic reinforced foundation as designed by a qualified geotechnical engineer. For additional information contact your local Contech representative.

3.5 A metal or concrete footing is required. When a metal foundation is used, the soil bedding requires a minimum of 6 inches of loose granular material with a maximum particle size of one half the corrugation depth. The proper width of the bedding material required shall conform to the project plans and specifications.

Bedding preparation is critical to both structure performance and service life. The bedding should be constructed to uniform line and grade to avoid distortions that may create undesirable stresses in the structure and/or rapid deterioration of the roadway. The bed should be free of rock formations, protruding stones, frozen lumps, roots, and other foreign matter that may cause unequal settlement.

3.6 The structure shall be assembled in accordance with the Manufacturer's instructions. All plates shall be unloaded and handled with reasonable care. Plates shall not be rolled or dragged over gravel rock and shall be prevented from striking rock or other hard objects during placement in trench or on bedding.

When installed on a full invert or on flexible footing pads, assembly of the invert or footing pads shall start at the downstream end. Circumferential seam laps shall shingle over the top of the downstream plates as assembly progresses upstream. Whether the box culvert is installed on a concrete footing, full metal invert, or flexible footing pad, assembly of the structure shell shall start at the upstream end. Downstream rings of plates shall be assembled outside of the upstream rings (Circumferential seams are shingled downstream when viewed from the inside of the shell).

3.7 The structure shall be backfilled using clean well graded granular material that meets the requirements for soil classifications A-1, A-2-4, A-2-5, or A-3 modified per AASHTO M-145. See the structural plate backfill group classification table on this sheet.

Backfill must be placed symmetrically on each side of the structure in 8 inch loose lifts. Each lift shall be compacted to a minimum of 90 percent density per AASHTO T-180.

3.8 Standard highway loads that meet the permissible design load limits for an Aluminum Box Culvert are not allowed on the structure until it is backfilled completely and pavement is in place.

The addition of temporary soil for heavy construction loads is not feasible or permissible for Aluminum Box Culverts. By design, these structures are limited in the range of permissible fill heights and live loads.

Heavy construction loads that exceed that of the particular highway live load design limits are not allowed on Aluminum Box Culverts without approval from the Engineer.

3.9 If an aluminum headwall and/or wingwall system is specified, the select granular structural backfill limits shall extend past the deadman anchor system. Contact the Engineer if stiff material or rock is encountered where the wingwalls and deadmen are to be installed.

EXHIBIT B - STORM WATER MANAGEMENT SYSTEM LONG-TERM MAINTENANCE PLAN

CITY OF NOVI DPS PERMIT NO. :
CITY OF NOVI DPS PLAN REVIEW NO.:

A. Physical Limits of the Storm Water Maintenance System
The storm water management system (SWMS) subject to this long-term maintenance plan (Plan) is depicted on Exhibit A to the permit and includes without limitation the storm sewers, catch basins, manholes, inlets, water quality structures, swales, buffer strip, spillways, forebay, detention basin, subsurface detention, outlet control structure and the outlet pipe that conveys flow from the detention basin to the natural drainage course to the XXXX. For the purposes of this plan, this storm water management system (SWMS) and all of its components as shown in Exhibit A is referred to as "Scenic Pines Final Planned Development", Pembine Road, City of Novi, Oakland County MI.

B. Time Frame for Long-Term Maintenance Responsibility
Singh Development, LLC is responsible for maintaining the "Scenic Pines Final Planned Development", Pembine Road, City of Novi, Oakland County MI., including complying with applicable requirements of the local or City of Novi soil erosion and sedimentation control program until City of Novi releases the construction permit. Long-term maintenance responsibility for the "Scenic Pines Final Planned Development", Pembine Road, City of Novi, Oakland County MI., commences when defined by the maintenance permit issued by the County. Long-term maintenance continues in perpetuity.

C. Manner of Insuring Maintenance Responsibility
City of Novi has assumed responsibility for long-term maintenance of "Scenic Pines Final Planned Development", Pembine Road, City of Novi, Oakland County MI. The resolution by which the City of Novi has assumed maintenance responsibility is attached to the permit as Exhibit C. Singh Development, LLC through a maintenance agreement with Canton Township, has agreed to perform the maintenance activities required by this plan. City of Novi retains the right to enter the property and perform the necessary maintenance of the "Scenic Pines Final Planned Development", Pembine Road, City of Novi, Oakland County MI. If Singh Development, LLC fails to perform the required maintenance activities, To ensure that the "Scenic Pines Final Planned Development", Pembine Road, City of Novi, Oakland County MI. is maintained in perpetuity, the map of the physical limits of the storm water management system (Exhibit A), this plan (Exhibit B), the resolution attached as Exhibit C, and the maintenance agreement between the City of Novi and the property owner(s) will be recorded with the Wayne County Register of Deeds. Upon recording, a copy of the recorded documents will be provided to the County.

D. Long-Term Maintenance Plan and Schedule
Table 1 identifies the maintenance activities to be perform, organized by category (monitoring /inspections, preventative maintenance and remedial actions). While performing maintenance, chemicals should not be applied to the forebay, detention basin, buffer strip or watercourses. Table 1 also identifies site-specific work needed to ensure that the storm water management system functions properly as designed.

TABLE 1
STORM WATER MANAGEMENT SYSTEM LONG-TERM MAINTENANCE SCHEDULE

MAINTENANCE ACTIVITIES	SYSTEM COMPONENTS: Catch Basins, Inlets & Storm Sewers	Channels & Vegetated Swales	Inlets To Pretreatment Systems	Subsurface Detention Basins	Open Detention Basins & Retention Basins	Flow Restrictors, Overflow Structures & Outlets Pipes	Emergency Spillways	Riprap	Pavement Areas	Manufactured Treatment Units	FREQUENCY
Monitoring /Inspection											
Inspect for sediment accumulation **/clogging of stone filter	X	X	X	X	X	X	X			X	Annually
Inspect for floatables, dead vegetation and debris	X	X	X	X	X	X	X		X	X	Annually and after major events
Inspect for erosion and integrity of bank and berms		X	X	X	X		X	X		X	Annually and after major events
Inspect all components during wet weather and compare to as-built plans	X	X	X	X	X	X	X	X	X	X	Annually
Monitoring planting/vegetation		X		X	X		X			X	2 times per year
Ensure means of access for maintenance remain clear/open	X	X	X	X	X	X	X	X	X	X	Annually
Preventative Maintenance											
Mowing		X			X	X		X			Up to 2 times/year, select areas only*
Remove accumulated sediment		X	X		X	X	X			X	As needed**
Remove floatables, dead vegetation and debris		X	X	X	X	X	X			X	As needed
Replace or wash/reuse stone riser filters							X	X	X		Every 3 years; more frequently as needed***
Remove invasive plant species		X			X	X				X	Annually
As Specified (e.g. recommendations by Manufacture)										X	As needed
Remedial Actions											
Repair/stabilize areas of erosion		X			X	X		X	X		As needed
Replaced dead plantings, bushes, trees		X		X	X	X					As needed
Reseed bare areas		X			X	X					As needed
Structural repairs	X		X				X	X	X	X	As needed
Make adjustments/repairs to ensure proper functioning	X	X	X	X	X	X	X	X	X	X	As needed

Notes:
*Not to exceed the length allowed by local community ordinance.
**Forebays, open detention basins, and retention basin to be cleaned whenever sediment accumulates to a depth of 6-12 inches or if sediment resuspension is observed.
***Replace stone if it cannot be adequately cleaned.

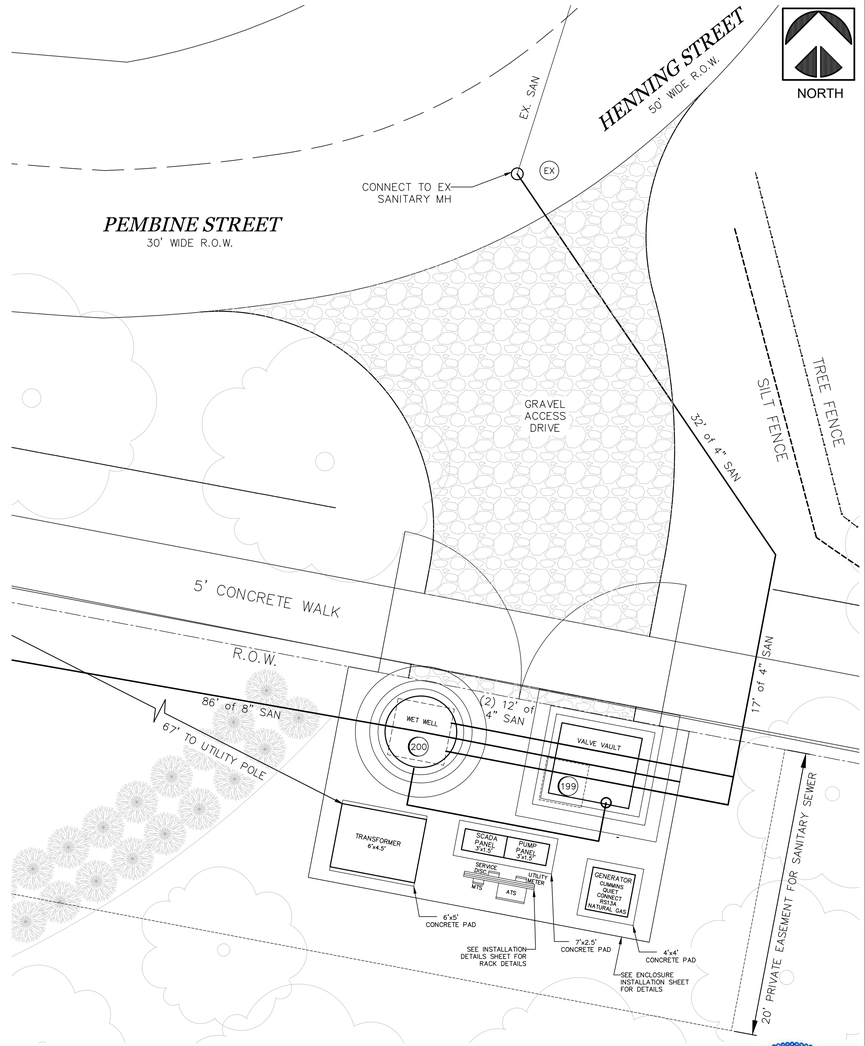
GENERAL NOTES:

1. CONTRACTOR SHALL FURNISH LOCKS (WHICH MEET OAKLAND COUNTY WATER RESOURCES COMMISSIONER REQUIREMENTS) WITH ONE MASTER KEY FOR THE EQUIPMENT ENCLOSURE, SAFETY SWITCHES AND HATCHES (INCLUDE GENERATOR).
2. SHOP DRAWINGS SHALL BE SUBMITTED FOR APPROVAL BEFORE FABRICATION OF EQUIPMENT AND STRUCTURES.
3. ACCESS COVER, ANCHOR BOLTS, AND PUMP LOCATION IN WET WELL SHALL BE CONFIRMED WITH APPROVED SHOP DRAWINGS PRIOR TO CONSTRUCTION.
4. PIPING SHALL BE PAINTED PER OAKLAND COUNTY WATER RESOURCES COMMISSIONER SPECIFICATIONS. (EPOXY COATED PIPE AND PVC PIPE SHALL NOT BE PAINTED)
5. SEAL ALL PIPE AND CONDUIT OPENINGS WITH NON-SHRINK GROUT UNLESS OTHERWISE SHOWN OR SPECIFIED.
6. DO NOT LOCATE LIQUID LEVEL SENSORS OR EMERGENCY FLOATS NEAR INFLUENT STREAM.
7. POWER METER ENCLOSURE SHALL BE FURNISHED BY DETROIT EDISON CO. AND INSTALLED BY CONTRACTOR.
8. PRECAST VALVE VAULT AND PUMP STATION WET WELL SHALL BE PROVIDED WITH REINFORCING STEEL TO MEET H-20 LIVE LOADS AND DEAD LOADS AS INDUCED BY STRUCTURE DEPTH. THE STRUCTURAL DIMENSIONS SHOWN SUCH AS WALL THICKNESS ARE FOR GUIDANCE ONLY. WET WELL SHALL BE A MINIMUM OF C76 CLASS IV CONCRETE.
9. STRUCTURE MANUFACTURER'S SHOP DRAWING SUBMITTAL SHOULD INCLUDE STRUCTURAL AND BUOYANCY CALCULATIONS BY A REGISTERED PROFESSIONAL ENGINEER IN THE STATE OF MICHIGAN
10. TWO INSTALLED PRESSURE INDICATORS ARE REQUIRED ON PUMP SIDE OF VALVES. IN ADDITION ONE INSTALLED PRESSURE GAUGE ON DOWNSTREAM END OF VALVE IS REQUIRED.
11. CONTRACTOR SHALL SUPPLY SPARE IMPELLER AND OTHER PARTS AS INDICATED IN SPECIFICATIONS.
12. CONTRACTOR SHALL PLACE WET WELL AND VALVE VAULT VENTS SUCH THAT THEY DO NOT FACE THE CONTROL PANEL.
13. ALL PIPE OPENINGS IN CAST STRUCTURES ARE TO BE CAST IN PLACE OR CORED. BREAK-OUTS WITH SLEDGEHAMMERS OR JACK HAMMERS IN THE FIELD WILL NOT BE ALLOWED.
14. SEE SPECIFICATIONS FOR SUMP PUMP INFORMATION: SUMP PUMP DISCHARGE PIPING SHALL BE 2" HDPE SDR 11 AND INCLUDE TWO (2) CHECK VALVES FOLLOWED BY ONE (1) BALL VALVE.
15. LADDER SPECIFICATION:
    A. FIBERGLASS LADDER AS MANUFACTURED BY IMCO OR APPROVED EQUAL
    B. LADDER RUNGS @16"O.C.
    C. ATTACH TO WET WELL WITH STANDOFF CLIPS AS REQUIRED
16. PUMPS SHALL BE EXPLOSION PROOF, SEE SPECIFICATIONS.
17. THE JOINT NEEDS TO BE RESTRAINED BY ONE OF THE FOLLOWING APPROVED METHODS:
    A. RESTRAIN JOINT TO WETWELL & VALVE VAULT STRUCTURE WALLS
    B. USE MECHANICAL JOINT RESTRAINT OR FIELD-LOCK GASKET
18. MUST INCREASE FROM A 2.5" D.I.P. TO A 4" D.I.P. AFTER THE PUMPS AND BEFORE THE WETWELL.
19. FLANGE JOINTS MUST BE USED IN WET WELL AND VALVE VAULT.
20. ONSITE EMERGENCY GENERATOR SHALL BE INSTALLED OF SUFFICIENT SIZE TO OPERATE ALL COMPONENTS OF PUMP STATION.
21. DETAILS AND INSTALLATION OF PUMP AND PLUMBING WITHIN THE WET WELL WELL BE AS REQUIRED PER THE PUMP MANUFACTURERS SPECIFICATIONS OR AS REQUIRED BY OCWRC.
22. CONTRACTOR SHALL FURNISH SHOP DRAWINGS OF THE COMPLETE PUMP FOR APPROVAL.
23. LIQUID LEVEL SENSORS SHALL BE ON OPPOSITE SIDE OF INFLUENT PIPE, NOT TO BE IMPACTED BY INFLUENT WASTEWATER.
24. CONTRACTOR IS RESPONSIBLE FOR INSTALLATION OF SCADA PANEL. WRC INTEGRATOR WILL TIE INTO WRC SCADA SYSTEM AND PERFORM PLC PROGRAMMING.
25. CONTROLS AND ELECTRICAL EQUIPMENT SHALL MEET WRC STANDARDS AND SPECIFICATIONS.



SITE PLAN OF PROPOSED SANITARY PUMP STATION
SCALE: 1" = 5'

*SEE SHEETS 30 THROUGH 32 FOR PUMP AND SCADA CONTROL PANEL DETAILS.
* SHOP DRAWINGS SHALL PROVIDE CONDUIT ROUTING AS REQUIRED.

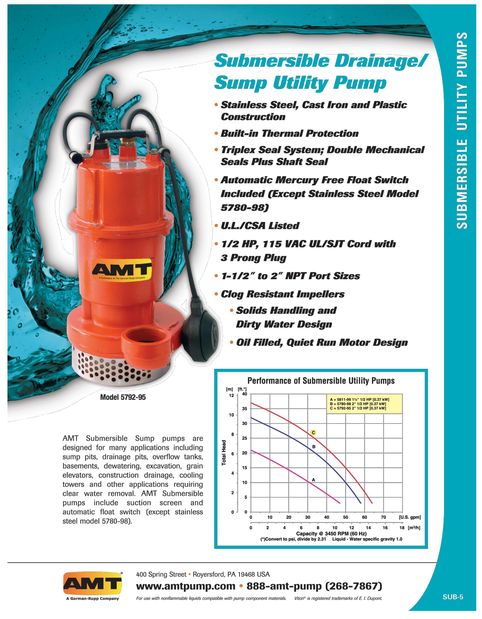
BASIS OF DESIGN FOR DUPLEX LIQUID LEVEL CONTROL SETTINGS



AMT Submersible Sump pumps are designed for many applications including sump pits, drainage pits, overflow tanks, basements, dewatering, excavation, grain elevators, construction drainage, cooling towers and other applications requiring clear water removal. AMT Submersible pumps include suction screen and automatic float switch (except stainless steel model 5780-98).

AMT A Gorman-Rupp Company

NOTES

1. Not available with "AO", "DE", "FPDXX", "PCLL", "PCS" or "PND".
2. Not available with cover options "C" or "M".
3. Only use if "N" for Trim and either "C" or "N" for Finial is selected.
4. Not available with "AH", "DE", "P6", "P7", "PCS" or "PND". Refer to instructions on website for details.
5. Not available with "AO", "AH", "PCLL", "PCS", "PSC" or "PND".
6. Refer to the FPDxx Data Table for lumens and wattages options.
7. Photocontrol not included. Not available with options "DE", "P6", "P7", "PSC" or "P7".
8. Photocontrol not included. Not available with options "DE", "H", "FPDXX", "PND" and "P5".
9. Photocontrol not included. Not available with options "DE", "H", "FPDXX" and "P6".
10. Requires "H", "P5", "P7" or "PND". Not available with "AO", "PCS" or "PSC" options.
11. Available with "AS" voltage only. Requires "H", "P5", "P7" or "PND". Not available with "AO", "PCLL" or "PSC" options.
12. Available with "AS" voltage only. Not available with options "AO", "DE", "H", "P5" and "P7".
13. Requires "H", "P5" or "P7" option photocontrol receptacle or "PND" (includes photocontrol receptacle). Not available with "PCLL" or "PCS".
14. Not available with "N" finial option or "M" option.
15. Not available with "N" finial option or "P" option.
16. Field installed. For use with units without factory installed ribs and band. X = Trim/Finial Color.
17. Field installed, for use with Optic "3" or "5" only.
18. Field installed, for use with Optic "6" or "8" only.

Lumen Ambient Temperature (LAT) Multipliers

Use these factors to determine relative lumen output for average ambient temperatures from 0-40°C (32-104°F).

Average Lumen Ambient Temperature (LAT) Multipliers			
°C	°F	Lumen Multiplier	LED Packages
0	32	1.06	
5	41	1.05	
10	50	1.04	
15	59	1.03	P10, P20, P30, P40, P50
20	68	1.01	
25	77	1.00	
30	86	0.99	
35	95	0.97	
40	104	0.96	

Projected LED Lumen Maintenance

Data references the extrapolated performance projections for the platforms noted in a 25°C ambient, based on 10,000 hours of LED testing (tested per IESNA LM-80-08 and projected per IESNA TM-21-11).
To calculate LLF, use the lumen maintenance factor that corresponds to the desired number of operating hours below. For other lumen maintenance values, contact factory.

Lumen Maintenance (LD (Lens Out of LED Package))							
Hours	0	25,000	36,000	50,000	60,000	75,000	100,000
Factor	1	0.93	0.93	0.92	0.91	0.9	0.89

The italicized data is extrapolated beyond the TM-21 standard.

E = (LM1 x (CU x LAT)+ x LLD)
LM and CU are obtained from published photometry.

Mark Appropriate Box for Trim Option

Housing: Modern (M), Leaf (T)

Cover: No Cover, Mayfield Cover (M), Full Cover (C)

Ribs & Bands: Ribs and Band (R), Ribs, Band, and Mayfield Cover (R & M), Ribs, Band, and Full Cover (R & C)

Finial: NONE (N), BALL (B), CLEAR (C), EAGLE (E), FLOWER (F), PAWN (P), CROSS (R), STANDARD (S), ROMAN CROSS (T)

Specifications

GENERAL DESCRIPTION
The GranVille II LED Utility is designed for ease of maintenance with the plug-in electrical module common to each of the luminaires in Holophane's Utility Luminaire Series. The traditional acorn shaped luminaire, while reminiscent of the 1920's, contains a precision optical system that maximizes post spacings while maintaining uniform illumination.
OPTICAL SYSTEM
The optical system consists of a precisely molded thermal resistant borosilicate glass refractor and top reflector mounted within the decorative aluminum housing. The glass top reflector redirects over 50% of the upward light into the controlling refractor while allowing a soft uplight component to define the traditional acorn shape of the luminaire. Two decorative aluminum covers are available. The lower refractor uses precisely molded prisms to maximize pole spacings while maintaining uniform illuminance. Two refractors are available, Luminaire Optics III and V distributions. Lunar optics shielding is available for asymmetric and symmetric distribution.
LUMINAIRE HOUSING
The luminaire housing, cast of aluminum, provides an enclosure for the plug-in electrical module. Four uniquely designed stainless steel spring clips enclosed in a clear polyvinyl chloride sleeve and adjusted by hex head 1/4-20 bolts securely cradle the prismatic glass refractor. The same 1/4-20 bolts support the decorative rib and banding assembly. The slipfitter will accept a 3" by 2-7/8" to 3-1/8" O.D. tenon.
LUMINAIRE HOUSING / DOOR
Cast of aluminum, the housing opens with minimum use of tools and is retained on a hinge. For units with an E.E.I.-N.E.M.A. twist lock photocell receptacle, the housing contains a "window" to allow light to reach the cell.
ELECTRICAL MODULE
The electrical components are mounted on a aluminum plate that is removable with minimum use of tools. A matching five conductor plug connects to the receptacle in the luminaire housing to complete the wiring. For photoelectric operation, the electrical module is provided with an E.E.I.-N.E.M.A. twist lock photocell receptacle.
DRIVER
AS drivers are programmable dimmable drivers, with 0-10V control leads and AH drivers are dimmable (0-10V) drivers.
FINISH
The luminaire is finished with polyester powder paint to insure maximum durability.
WARRANTY
Limited warranty located at http://www.acuitybrands.com/resources/terms-and-conditions.
NOTE
Luminaire is CSA listed for Wet Locations.
Luminaire housing is IP55 rated. Optical chamber is IP66 rated.
Specification subject to change without notice.

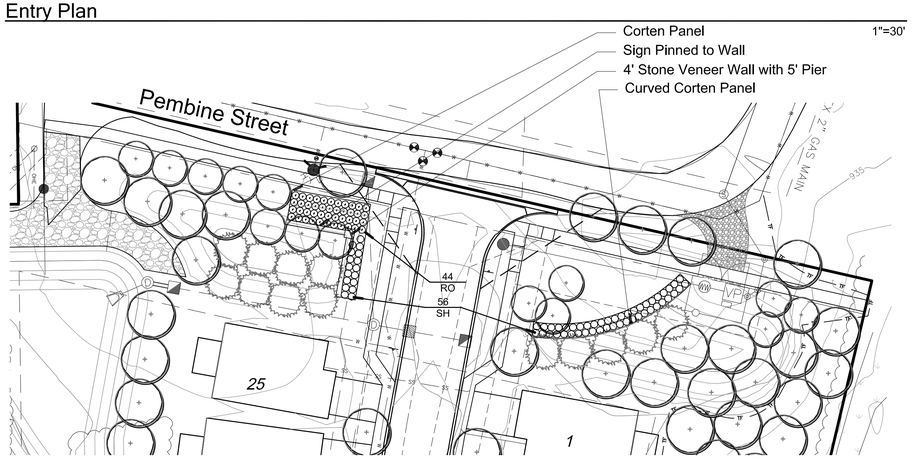
Entry Plan



Landscape Summary

Street Trees	
Unit Trees	25 Units
Trees Required	25 Trees (1 per unit)
Trees Provided	25 Trees
Street Lawn	
Total Street Frontage	367 l.f.
Less Drive Opening	28 l.f.
Net Street Frontage	339 l.f.
Trees Required	9.6 Trees (339 / 35)
Trees Provided	5 Trees
Greenbelt Plantings	
Total Street Frontage	367 l.f.
Less Drive Opening	28 l.f.
Net Street Frontage	339 l.f.
Canopy Trees Required	8.5 Trees (339 / 40)
Canopy Trees Provided	9 Trees
Sub-Canopy Trees Required	13.5 Trees (339 / 25)
Sub-Canopy Trees Provided	14 Trees

Woodland Replacement	
Replacement Required	438 Trees
Total Trees Provided	88.6 Trees
Trees to be Paid into Fund	349.4 Trees
Detention Pond	
High Water Length	415 l.f.
Landscape Required	291 l.f. (415 x 70%)
Landscape Provided	301 l.f. (73%)

LANDSCAPE WAIVERS GRANTED BY THE PLANNING COMMISSION ON 9/25/2019:
3 street trees are planted more than 15 feet behind the curb, and not between the sidewalk and curb.

Absence of 3 required street trees along Pembine street frontage that can't be planted due to a lack of space between the sidewalk and road.

Notes:

- Trees Shall be Planted 10' from Utility Structures Including Hydrants
- Snow Shall be Deposited Adjacent to Drives and within the Curb Lawn
- All Utility Boxes Shall be Screen per Detail on Sheet L-2
- Overhead Lines are Not Present
- Phragmites is not Present on the Site.

CITY OF NOVI NOTES

1. All landscape islands shall be backfilled with a sand mixture to facilitate drainage.
2. All proposed landscape islands shall be curbed.
3. All landscape areas shall be irrigated.
4. Overhead utility lines and poles to be relocated as directed by utility company of record.
5. Evergreen and canopy trees shall be planted a minimum of 10' from a fire hydrant, and manhole, 15' from overhead wires.
6. All plant material shall be guaranteed for two (2) years after City Approval and shall be installed and maintained according to City of Novi standards. Replace Failing Material within 3 Months of Discovering the Need for Replacement. One cultivation per month shall occur in July-August.
7. All proposed street trees shall be planted a minimum of 4' from both the back of curb and proposed walks.
8. All tree and shrub planting beds shall be mulched with shredded hardwood bark, spread to minimum depth of 4". All lawn area trees shall have a 4' diameter circle of shredded hardwood mulch 3" away from trunk. All perennial, annual and ground cover beds shall receive 2" of dark colored bark mulch as indicated on the plant list. Mulch is to be free from debris and foreign material, and shall contain no pieces of inconsistent size.
9. All Substitutions or Deviations from the Landscape Plan Must be Approved in Writing by the City of Novi Prior to their Installation.

NOTES:
THE APPROXIMATE DATE OF INSTALLATION FOR THE PROPOSED LANDSCAPE WILL BE FALL OR SPRING OF 2020 or 2021.

THE SITE WILL BE MAINTAINED BY THE DEVELOPER IN ACCORDANCE WITH THE STANDARDS SET FORTH IN THE CITY OF NOVI ZONING ORDINANCE. THIS INCLUDES WEEDING AND WATERING AS REQUIRED BY NORMAL MAINTENANCE PRACTICES.

DEVELOPER SHALL BE RESPONSIBLE FOR REPLACING ANY TREES WITHIN UTILITY EASEMENTS THAT ARE DAMAGED THROUGH NORMAL MAINTENANCE OR REPAIRS.

PLANT MATERIALS SHALL BE GUARANTEED FOR 2 YEARS AND SHALL BE MAINTAINED IN ACCORDANCE WITH CITY ORDINANCES. WARRANTY PERIOD BEGINS AT THE TIME OF CITY APPROVAL. WATERING AS NECESSARY SHALL OCCUR DURING THIS WARRANTY PERIOD.

LANDSCAPE NOTES

1. All plants shall be north Midwest American region grown, No. 1 grade plant materials, and shall be true to name, free from physical damage and wind burn.
2. Plants shall be full, well-branched, and in healthy vigorous growing condition.
3. Plants shall be watered before and after planting is complete.
4. All trees must be staked, fertilized and mulched and shall be guaranteed to exhibit a normal growth cycle for at least two (2) full years following City approval.
5. All material shall conform to the guidelines established in the most recent edition of the American Standard for Nursery Stock.
6. Provide clean backfill soil, using material stockpilled on site. Soil shall be screened and free of any debris, foreign material, and stone.
7. "Agriform" tabs or similar slow-release fertilizer shall be added to the planting pits before being backfilled.
8. Amended planting mix shall consist of 1/3 screened topsoil, 1/3 sand and 1/3 compost, mixed well and spread to the depth as indicated in planting details.
9. All plantings shall be mulched per planting details located on this sheet.
10. The Landscape Contractor shall be responsible for all work shown on the landscape drawings and specifications.
11. No substitutions or changes of location, or plant types shall be made without the approval of the Landscape Architect.
12. The City of Novi's Landscape Architect shall be notified in writing of any discrepancies between the plans and field conditions prior to installation.
13. The Landscape Contractor shall be responsible for maintaining all plant material in a vertical condition throughout the guaranteed period.
14. The Landscape Architect shall have the right, at any stage of the installation, to reject any work or material that does not meet the requirements of the plans and specifications, if requested by owner.
15. Contractor shall be responsible for checking plant quantities to ensure quantities on drawings and plant list are the same. In the event of a discrepancy, the quantities on the plans shall prevail.
16. The Landscape Contractor shall seed and mulch or sod (as indicated on plans) all areas disturbed during construction, throughout the contract limits.
17. A pre-emergent weed control agent, "Preen" or equal, shall be applied uniformly on top of all mulching in all planting beds.
18. All landscape areas shall be provided with an underground automatic sprinkler system.
19. Sod shall be two year old "Baron/Cheriadelphi" Kentucky Blue Grass grown in a sod nursery on loam soil.

DETENTION POND SEED NOTES

Site Preparation

Planting may be top of mind, but **preparing your site is critical to success**. Weed seeds are persistent and undesirable species will be a long-term problem if eradication of undesirable and invasive vegetation isn't complete before installation.

Eradicate all existing vegetation
Too much undesirable vegetation may require this course through one or a combination of the following techniques.

- ***Cultivating***
  Avoids the use of chemicals and can be done on a larger scale than smothering, but it often brings up more weed seeds and is labor intensive. Cultivate every 2-3 weeks from early spring through fall to a depth of 4-5 inches using a harrow, spring tooth or rototiller to destroy the roots and weeds. Once most weeds have been eliminated, the depth should be made shallow for several months to create a firm soil bed prior to native seeding.
- ***Herbicide***
  If your site is very large or if there is little or no native vegetation present, herbicides may the most economical and successful option. The number of treatments will depend on the condition of the site. Ag sites may only require one or two treatments directly prior to planting, while old fields might require several treatments throughout an entire season. **Caution: Some herbicides remain persistent long after application. Know the chemical history of your site and always READ THE LABEL and follow manufacturer's instructions when using herbicides.**

Preparing the Seed Bed
A firm and level seed bed relatively free of debris is ideal for proper installation. Pack loose or soft soil with a heavy roller or culti-packer before (and after) installation. A good method for testing soil firmness is to walk over the seed bed. If your footprint sinks more than or inch, the seed bed is too soft. If a no-till drill seeder is being used and the site wasn't cultivated, the seed bed should be firm enough. Removing tree roots and limbs from eliminated trees, other debris (corn stubble) and regrading ruts will make for a smoother planting process as well as limit damage to equipment.

Installation

Seeding Methods
Your planting method depends on the size of your site, condition of the soil, and your budget. Regardless of the method you choose, seed to soil contact and planting depth (no deeper than) are critical factors in growing native seeds. Keep this in mind before, during, and after seeding.

- ***Broadcast***
  Best for areas less than a couple acres and generally the least expensive method, but requires a cultivated and firm seed bed. The native seed mix can be scattered a handful at a time from a bucket or you can use a hand crank seeder to cover more area faster. You can also use an ATV or tractor mounted broadcast spreader.
  To evenly spread seed across the entire site, divide your mix in half and scatter the first half of the seed over the entire area, then scatter the second half perpendicular to the first pass. Further divisions will give you more chances to calibrate your technique and ensure adequate coverage. Consider adding a filler such as cracked corn, vermiculite or a nurse crop of annual rye and seed oats to create more bulk. If it is too windy, wait for the wind to decrease.
  Roll the seed into the top surface of the soil for best results, or lightly rake the seed into the soil surface using an upside-down leaf rake. If the area is too large to rake by hand, use a tractor or truck to pull a light piece of fence or very light drag.

- ***No-Till Native Seed Drill***
  Perfect for larger areas with hard ground or existing vegetation debris, no-till drills cause minimal soil disturbance and do not require tillage before planting. Fewer weed seeds are brought up from the seec bank, but the technique requires the use of herbicide. No-till drills plant into rows by opening a shallow groove in the soil, dropping the seeds, then covering the groove with soil with a rubber packer wheel.
  No-till drills are available to rent from many conservation districts, but proper training or instruction is required to correctly use them. Calibration and depth adjustment vary between mixes and sites and are critical to ensure proper distribution and placement of seed. Many dollars in seed are wasted due to improper use of no-till drills.

- ***Culti-packer and Conservation Seeders***
  Works well for bare, loose soil by firming the seed bed with a culti-packer/roler, dropping the seed, and then packing the soil with another roller to ensure good seed-to-soil contact. These types of machines are becoming more common, and are preferable to a no-till drill when planting into bare, loose soils.

Watering & Irrigation
Watering is not necessary after fall plantings. It's not essential following a spring seeding either, but the seeds may benefit from watering during the first 3 to 6 weeks, especially if no rain has fallen for 7-10 days. If watering is practical for your site and you decide to irrigate, you will need to continue watering periodically to keep the soil from drying out while plant seedlings establish. In a dry spring, quicker establishment may result with supplemental watering.

Maintenance

After you've planted, controlling weeds is the priority for the first three years. The native plants will only grow a few inches the first year; weeds will grow much thicker and taller than the natives and can shade out the native seedlings. A simple, but diligent, maintenance plan will ensure your native planting reaches the best possible outcome.

First Year
Mowing the vegetation to a height of 4-6 inches when it reaches 10-12 inches. If you get a lot of rain, you may have to mow about once a month. Mowing keeps the weeds from shading out the natives, as well as stopping the weeds from producing new seeds. Stop mowing at the end of the growing season. A little weed growth at the end of the year will help protect the seedlings during their first winter.

Hand pulling weeds and herbicide are generally **not recommended** in the first year. You risk harming the sensitive native seedlings. If aggressive weeds, like Canada thistle or reed-canary grass, appear to be a problem you can consider careful herbicide application. Take care not to allow herbicide to contact native vegetation.

Second Year
When the vegetation reaches 12-18 inches, mow it down to 8 inches. Because you're allowing it to grow higher, you should mow fewer times in the second year. You'll see some natives blooming, but it is worth sacrificing the flowers at this stage to achieve better weed control and a more successful native planting in the long term. The natives will persist through mowing and a few will bloom at lower heights in response to repeated mowing.

Hand pulling and spot treatments of herbicide may be needed for some of the common competitive weeds such as spotted knapweed, Canada thistle, burdock, wild parsnip, sweet clover, and Queen Annes lace.

Third Year and Beyond
If the planting is establishing as it should, you should now have enough fuel accumulated to burn on a regular basis. If burning doesn't occur, a thatch layer can accumulate, causing poor growth or plants to die out completely. Burning kills or at least reduces weed growth and stimulates growth of native species.

Early spring burns are most common. Only experienced, trained crews should perform a prescribed burn. Be sure to check your local fire regulations and obtain the appropriate permits. A wide path (10-15 feet) or burn lane should be mowed throughout the growing season around the perimeter of the planting prior to a burn.

After the third year, burning should take place every one to three years. Consider a burn rotation in which a half or third of the area is burned one year and another section the next. This will give ensure that over-wintering butterflies, moths, and nesting birds do not temporarily lose all of their habitat.

Spot treating with herbicide may still be needed if weeds persist, however, once your natives are established, they should require minimal maintenance.

The landscape contractor shall send the City's Landscape Architect, Rick Meader at (rmeader@cityofnovi.org) a photo of the label on the seed bag to confirm that the correct mix is used. Failure to use the specified mix or a substitute not approved by the City may require the area to be re-prepared and re-seeded with the correct mix.

DETENTION POND SEED MIXES

Emergent Seed Mix

Botanical Name	Common Name	PLS Oz/Acre
Boiboschoenus luviatilis	River Bulrush	1.00

VALVE DESIGNATION:
Controller and Station Number
Valve Size
Gallons Per Minute

NOTES:
1. Refer to the specifications for installation details and descriptions, as well as, construction methods which will be accepted.
2. All work shall be in compliance with all local, state, and federal codes and ordinances.
3. All electrical connections shall be made using 3m DBY–6 splice kits.
4. All control wiring downstream of the controller shall be Hunter IDWIRE communication cable UL approved for direct bury.
5. All polyethylene lateral pipe clamps shall be stainless steel worm gear type clamps. Lateral pipes 1–1/2" or larger shall be double clamped.
6. Pipe routing is schematic. All heads are to be field adjusted to within 2' to take into consideration any obstruction. Final head placements are subject to the landscape architects approval.
7. All sprinkler heads shall be mounted on 2 elbow poly swing joints as specified.
8. Contractor to verify final controller location with owner's authorized representative prior to installation.
9. All pipe not sized downstream of control valve is 1".
10. All sleeves shall be PVC SDR 21 (see specifications).
11. Irrigation contractor's point of connection to water source shall be as noted on this sheet.
12. Locate and connect to indicated water source. All pipe installed above grade shall be copper type "M".
13. 120v power to the controller locations should be provided others. Coordinate with owner's representative. Hardwire controller directly to nearest circuit panel. Place all wires in conduit per code.
14. Design pressure does not take into account seasonal supply fluctuations. Periods of drought may cause temporary pressure losses to the city water supply resulting in inadequate irrigation system performance. Irrigation design is based on normal weather conditions and typical municipal water supply abilities.
15. Irrigation contractor shall be responsible for determining and maintaining the irrigation schedule during the project construction and throughout the length of the warranty period.
16. The irrigation schedule shall deliver 1" of precipitation per week +/– natural rainfall quantities for turf grass.
17. Landscape material shall receive adjusted amounts of precipitation to maintain proper plant health.
18. Landscape and turf grass shall be irrigated separately.
19. Rotors and spray zones may not be combined to operate at the same time.

PLANNING COMMISSION
ACTION SUMMARY

CITY OF NOVI
Regular Meeting
September 25, 2019 7:00 PM
Council Chambers | Novi Civic Center
45175 W. Ten Mile (248) 347-0475

CALL TO ORDER
The meeting was called to order at 7:00 PM.

ROLL CALL

Present:	Member Anthony, Member Avdoulos, Member Ferrell, Member Gronachan, Member Lynch, Member Maday
Absent:	Chair Pehrson
Also Present:	Barbara McBeth, City Planner; Sri Komaragiri, Planner; Kate Richardson, Staff Engineer; Rick Meader, Landscape Architect; Thomas Schultz, City Attorney; Pete Hill, Environmental Consultant; Josh Bocks, Traffic Engineering Consultant; Doug Necci, Façade Consultant

APPROVAL OF AGENDA

Motion to approve the September 25, 2019 Planning Commission Agenda. *Motion carried 6-0.*

CONSENT AGENDA - REMOVALS AND APPROVAL

1. **39500 ORCHARD HILLS PLACE JF19-04 – SECTION 9 WAIVER**
   Approval of the request of JFK Investment Company, LLC, for 39500 Orchard Hills Place JSP19-04 for a Section 9 waiver related to an exterior remodel. The subject parcel is located in Section 36, west of Haggerty Road north of Eight Mile Road. It is zoned OSC, Office Service Commercial. The existing building was constructed in 1986, prior to the adoption of the Façade Ordinance. The applicant proposes to update the building facades to replace the existing primary material, EIFS, with a Flat Metal Panel system.

In the matter of request of JFK Investment Company, LLC, for 39500 Orchard Hills Place JSP19-04, motion to approve a Section 9 Façade Waiver to allow an underage of brick (30% required, 7% proposed) and an overage of Flat Metal Panels (50 % maximum allowed, 93% proposed) because bringing the existing building into compliance would represent extreme practical difficulty and would not significantly enhance the appearance of the building. *Motion carried 6-0.*

2. **CROSSPOINTE MEADOWS ACCESSORY BUILDING JSP 19-36**
   Approval at the request of Crosspointe Meadows Church for Preliminary Site Plan with a Section 9 waiver. The subject property is located on the eastside of

Meadowbrook Road, south of Thirteen Mile Road in section 12 . The primary building on the property is a Church. The applicant is proposing to build a 480 square feet storage building in the rear yard, adjacent to the existing dumpster. No other changes to the site plan are proposed.

In the matter of Crosspointe Meadows Church Accessory Building, JSP 15-40, motion to approve the Preliminary Site Plan and a Section 9 Waiver, based on and subject to the following:

a. **To allow the underage of brick on south façade (30% minimum required, 23% proposed) and overage of EIFS on the south façade (25% maximum allowed, 44% proposed) and Trim on the south façade (15% maximum allowed, 33% proposed), because the deviations are a result of the large overhead door which is not regulated by the Ordinance and the plan is consistent with the intent and purpose of the Façade Ordinance, which is hereby granted;**

b. **A waiver to allow a painted island in lieu of a raised end island near the entrance to the storage shed, because the drive is only used for dumpster pick up and lawn maintenance vehicles, which is hereby granted;**

c. **The findings of compliance with Ordinance standards in the staff review letter and the conditions and the items listed in that letter being addressed.**

Motion Carried 6-0.

PUBLIC HEARINGS

1. **GOLLING MASERATI & ALFA ROMEO JZ19-28 WITH REZONING 18.728**

   Public hearing at the request of Dorchen/Martin Associates for Planning Commission's recommendation to City Council for a Planned Rezoning Overlay Concept Plan associated with a Zoning Map amendment, to rezone from NCC (Non-Center Commercial) to B-3 (General Business). The subject property is approximately 5.25 acres and is located on the south side of Grand River Avenue, west of Joseph Drive (Section 24). The applicant is proposing an automobile dealership, a permitted use in the B-3 District, with outdoor space for exclusive sale of new and used automobiles, which is a Special Land Use in the B-3 District.

In the matter of Golling Maserati & Alfa Romeo, JZ19-28, with Zoning Map Amendment 18.728, motion to postpone making a recommendation to the City Council to rezone the subject property from NCC (Non-Center Commercial) to B-3 (General Business) with a Planned Rezoning Overlay Concept Plan. This motion is made for the following reason: the applicant requested that the matter be postponed until the October 30th meeting. ***Motion Carried 6-0.***

1. **SCENIC PINES ESTATES JSP 18-76**

   Public hearing at the request of Singh Development for Preliminary Site Plan With One-Family clustering Option, Site Condominium, Special Land Use, Wetland Permit, Woodland Permit and Stormwater Management Plan Approval. The subject properties are approximately 9.44 acres and are located south of South Lake Drive and south side of Pembine Drive (Section 3). The applicant is proposing to utilize the One-family Cluster Option to develop a site condominium with 25 single family detached homes.

In the matter of Scenic Pines Estates, JSP 18-76, motion to approve the Special Land Use Permit based on and subject to the following:

1. **The proposed use will not cause any detrimental impact on existing thoroughfares *(based on the Traffic review);***
2. **The proposed use will not cause any detrimental impact on the capabilities of public services and facilities*;***
3. **The proposed use is compatible with the natural features and characteristics of the land *(because the applicant is proposing to preserve 53% of qualifying area that includes regulated woodlands and wetlands);***
4. **The proposed use is compatible with adjacent uses of land *(because the subject property is surrounded by single family residential uses. Façade review notes that the proposed elevations portray an overall architectural standard equal or higher than the existing homes in the surrounding neighborhood)*;**
5. **The proposed use is consistent with the goals, objectives, and recommendations of the City's Master Plan for Land Use (because *the development is age-targeted. The proposed floor plans indicate first-floor master);***
6. **The proposed use will promote the use of land in a socially and economically desirable manner;**
7. **The proposed use is (1) listed among the provision of uses requiring special land use review as set forth in the various zoning districts of this Ordinance, and (2) is in harmony with the purposes and conforms to the applicable site design regulations of the zoning district in which it is located;**
8. **The approval shall be subject to the following conditions at that time:**
   a. **The Planning Commission finding that Parcel ID No. 22-03-327-004, mentioned in the notes to the site plan, located on the north side of South Lake Drive, is not part of this development and shall not become or be made part of this development, as it does not comply with Sec. 36-62, Lakefront use standards, of the City Code of Ordinances as relates to lakefront recreational parks;**
   b. **Maintenance and reconstruction of the roads during and after construction, dust maintenance control and the stipulation that the roads be videotaped before and after construction to determine reconstruction requirements;**
   c. **Limit Construction times with respect to elementary school bus schedule;**
   d. **Construction traffic to comply with the City load limits; and**
9. **Final Site Plan shall come back to Planning Commission for Final Approval.**

Motion Carried 6-0.

In the matter of Scenic Pines Estates, JSP 18-76, motion to approve the Preliminary Site Plan with One-family clustering option and the Site Condominium based on and subject to the following:

1. **Planning Commission's finding per Section 3.28.1.B, that in all one-family residential districts, the clustering of one-family dwellings may be permitted, provided that the land consists of an unsubdivided area and the proposed site plan and, that the conventional approach to residential development would destroy the unique environmental significance of the site, and that the use of the cluster option is a desirable course of action to follow based on the following condition.**
   a. **The majority (fifty (50) percent) of the net site area (defined as the area which is delineated by parcel lines, exclusive of rights-of-way as shown on the adopted master plan) is composed of lands that are within jurisdiction of Woodland Protection Ordinance, as amended, Chapter 37 of the Code of Ordinances, or within the jurisdiction of the Wetland and Watercourse Protection Ordinance, as amended, Chapter 12, Article V of the Code of Ordinances, or any combination**

of such lands. The applicant is proposing to permanently preserve up to 53% of qualifying area on site.

2. **Planning Commission approval for reduction of minimum distance between the clusters, based on the finding, subject to conditions listed in Section 3.28.5., that the strict application of the distance in this instance would destroy a natural amenity such as regulated wetlands and woodlands. This is required for the Units 1-2-3 cluster and the Units 22-23-24-25 cluster. A minimum of 85 feet is required, approximately 78 feet is proposed;**
3. **Planning Commission approval of reduction of front building setbacks from the streets as listed in Section 3.28.4.D. A minimum of 30 feet is required from the edge of Private drive, the plans currently propose 25 feet in order to protect regulated woodlands in the back yards; this is based on the following findings listed in Section 3.28.6.C:**
   a. **All the conditions listed in Section 3.28.6.C. from i thru iv are met with the exception as noted below;**
   b. **A Zoning Board of Appeals variance from Section 3.28.6.C.iv.a to allow absence of required berm along the east, west and south property boundaries adjacent to other single-family residential districts;**
4. **Planning Commission waiver for reduction of the minimum distance for opposite-side spacing requirement, Design and Construction Standards Section 11-216(d), for the roadway spacing between Pristine Lane and Henning Street(A minimum of 200 feet is required, 117 feet is proposed, due to estimated low volume of vehicles expected from the proposed development, which is hereby granted;**
5. **A landscape waiver for absence of three required street trees along Pembine Street Frontage , as listed in 5.5.3.E.i.c and LDM 1.d., due to lack of space between the edge of pavement and the future Right-of-way ad conflicts with other required proposed utilities and swales, which is hereby granted;**
6. **A landscape waiver from Section 2.1 of Landscape Design Manual to allow some of the proposed trees to be located outside of the space between the sidewalk and the curb due to conflicts with proposed utilities, which is hereby granted. This waiver is supported as most of the proposed trees are located within 15 feet from the curb, with an exception of three trees;**
7. **Administrative approval from Engineering for variance from Engineering Design Manual Section 7.4.2.C.1 for not meeting the minimum distance of 15 feet from back of curb to outside edge of sidewalk;**
8. **The applicant shall revise the woodland replacement plan at the time of final site plan to avoid the conflict between the proposed tree replacement locations and the existing overhead electric line along the western property boundary;**
9. **The applicant shall obtain necessary approvals from all related outside agencies for the proposed location of storm water pond and related landscape under the existing overhead lines prior to approval of Final site plan;**
10. **Assurance of the permanence of the open space and its continued maintenance shall be submitted for review and approval by the City Attorney at the time of final site plan approval.**
11. **The findings of compliance with Ordinance standards in the staff and consultant review letters, and the conditions and items listed in those letters, as well as all of the terms and conditions of the PRO Agreement as approved, with these items being addressed on the Final Site Plan; and**
12. **The Final Site Plan shall come back to Planning Commission for Final Approval.**

Motion Carried 6-0.

In the matter of Scenic Pines Estates, JSP 18-76, motion to approve the Wetland Permit based on and subject to the findings of compliance with Ordinance standards in the staff and consultant review letters, and the conditions and items listed in those letters being addressed on the Final Site Plan. *Motion Carried 6-0.*

In the matter of Scenic Pines Estates, JSP 18-76, motion to approve the Woodland Permit based on and subject to the findings of compliance with Ordinance standards in the staff and consultant review letters, and the conditions and items listed in those letters being addressed on the Final Site Plan. *Motion Carried 6-0.*

In the matter of Scenic Pines Estates, JSP 18-76, motion to approve the Stormwater Management Plan, based on and subject to the findings of compliance with Ordinance standards in the staff and consultant review letters, and the conditions and items listed in those letters being addressed on the Final Site Plan; and the Final Site Plan must come back to Planning Commission for Final Approval. *Motion Carried 6-0.*

MATTERS FOR CONSIDERATION

1. **APPROVAL OF THE AUGUST 28, 2019 PLANNING COMMISSION MINUTES**

Motion to approve the August 28, 2019 Planning Commission Meeting Minutes. *Motion carried 6-0.*

ADJOURNMENT

The meeting was adjourned at 9:41 PM.

*****Actual language of the motions subject to review.*
